# 1 Summary of overall results

## 1.1 nPerf score, all technologies combined, [2G->5G]

**Vodafone UK** provided the Best Mobile Internet Performance 2019.

## 1.2 Our analysis

In 2019, nPerf users has made **42,033 connection tests** (including speed test, browsing and streaming test) with nPerf mobile app (iOS, Android).

After filtering, our survey is based on **35,664 relevant tests** performed by more than 10,000 users. With these tests nPerf measures the real customer performance.

The nPerf score goal reflects the customer experience. It is based on the five most important KPI's (download speed, upload speed, latency, streaming and browsing).

With 78,284 nPoints, **Vodafone UK has provided the best mobile internet performance 2019.**

Vodafone UK is the winner of following categories:

- **Best download speed** with 50.35 Mb/s
- **Best upload speed** with 13.66 Mb/s

And has been the joint winner (\*) with EE :

- **Best latency** with 43.99 ms
- **Best browsing performance** with a performance rate of 70.55%
- **Best streaming performance** with a performance rate of 83.92%

In the end, Vodafone UK wins with EE following closely.

### London: The Best Mobile Internet Performance 2019

In London, Vodafone UK also provided the best mobile network performances, with, results achieving better than the rest of the UK.

- **Best download speed** with 65.98 Mb/s
- **Best upload speed** with 16.53 Mb/s

And has been the joint winner (\*) with EE :

- **Best latency** with 39.18 ms
- **Best browsing performance** with a performance rate 73.31%
- **Best streaming performance** with a performance rate of 86.18%

(\*): Cf §6.1.3 Statistical accuracy.

## 2 Overall results

Results from all cell generations (2G to 5G) taken from tests carried out on 4G-compatible terminals.

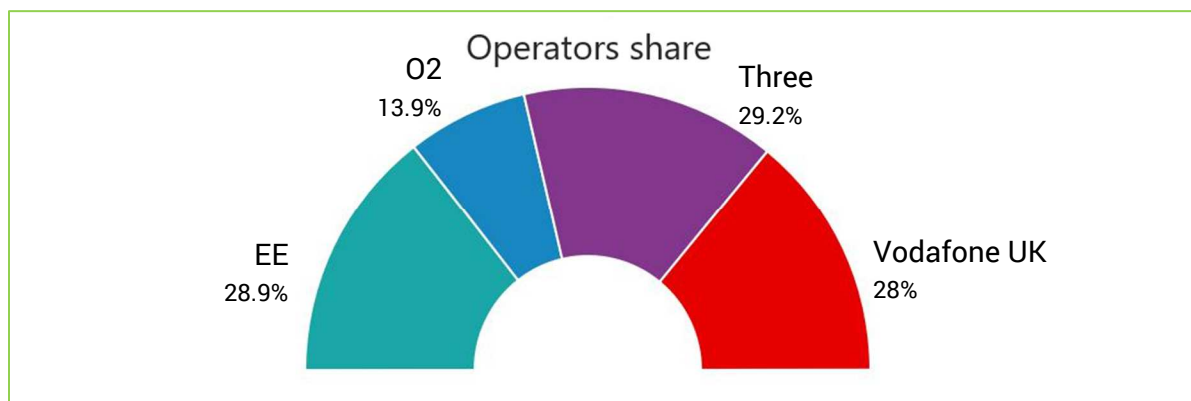

### 2.1 Data amount and distribution

The nPerf application allows the user to perform a full test(\*) or each test separately. Between January 1, 2019 – December 31, 2019, we counted **42,033** unit tests, distributed as follows, after filtering (see § 6.1.3):

Technology	Speed	Browsing	Streaming
[2G -> 5G]	20,579	8,165	6,920

(\*) a full test (speed, web browsing, streaming) = 3 unit tests.

The overall breakdown of the tests per provider is as follows:

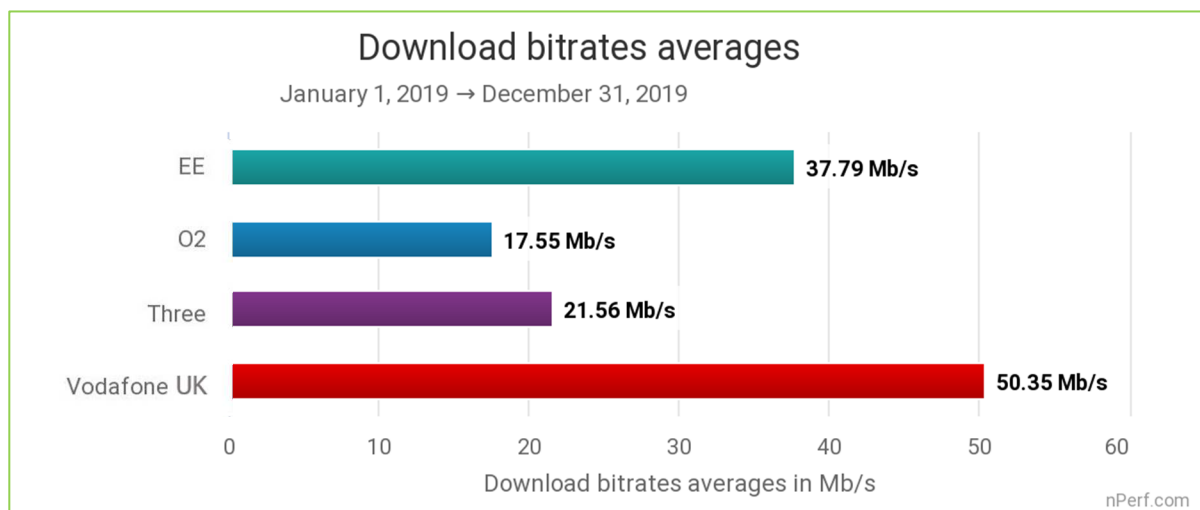

### 2.2 Success rate [2G->5G]

The success rate is the number of successful tests compared to the number of tests performed.

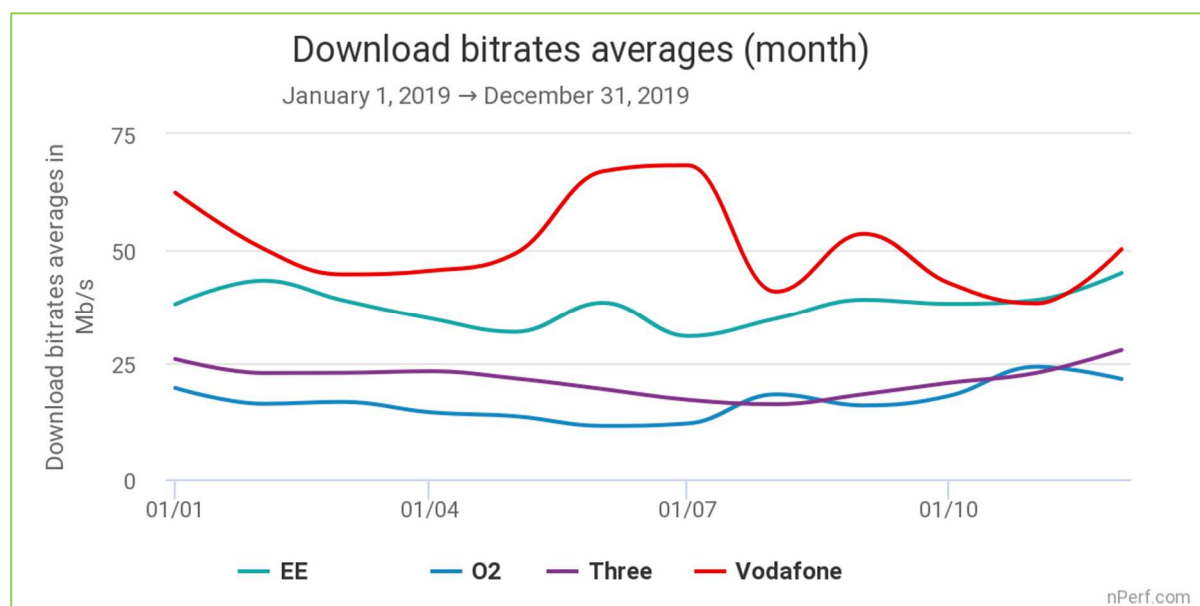

**Vodafone UK has recorded the best success rate in 2019, across all mobile technologies combined.**

## 2.3 Download speed [2G->5G]

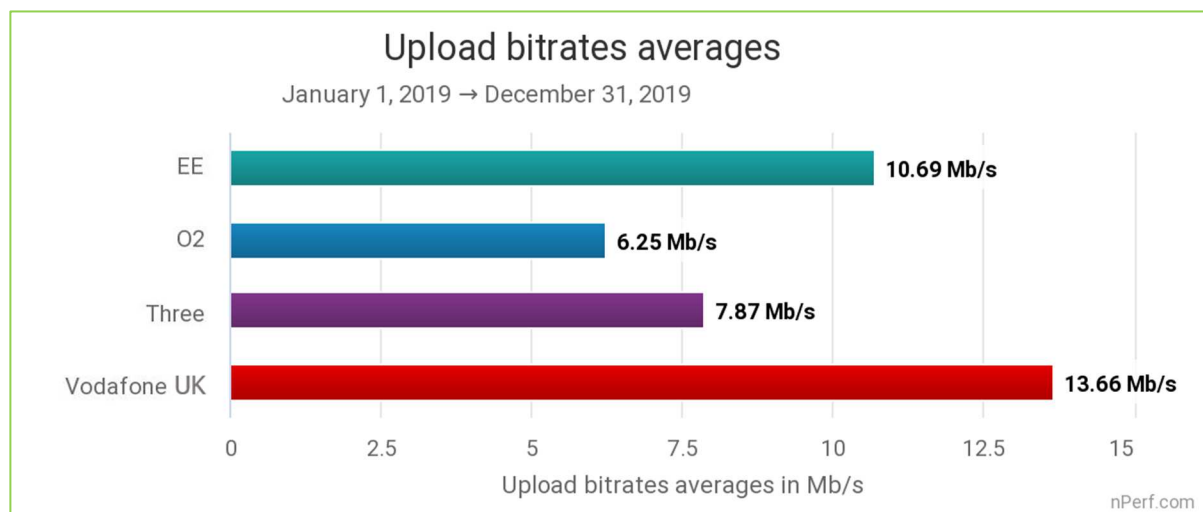

**Vodafone UK has provided the best mobile download speed during 2019.**

This graph illustrates the ability of providers to maintain a constant download speed during the year, regardless of network load (number of connected end-users).

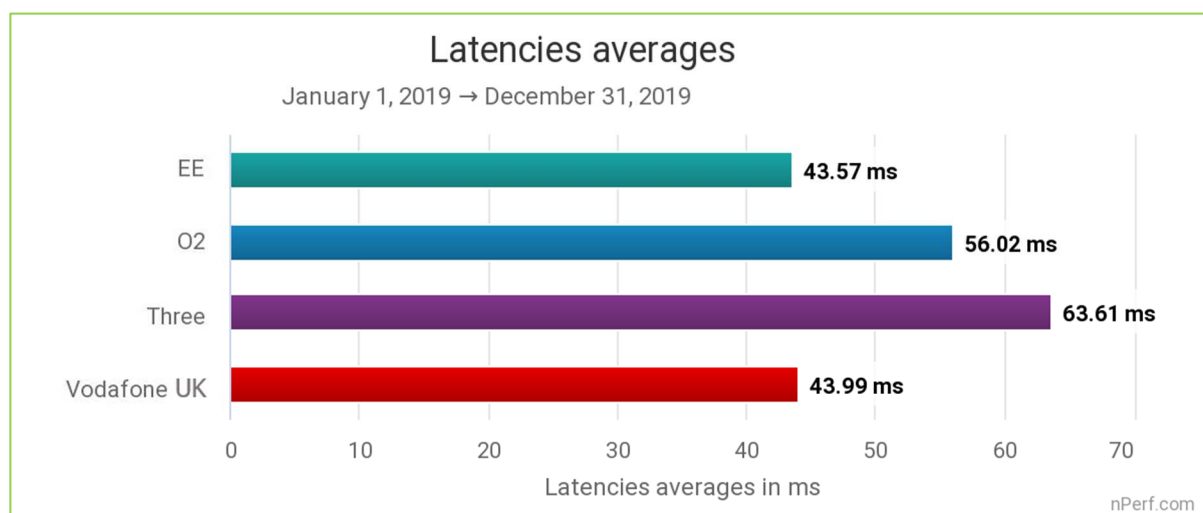

EE, Three and O2 are quite stable while Vodafone reaches at some periods bigger throughputs.

## 2.4 Upload speed [2G->5G]

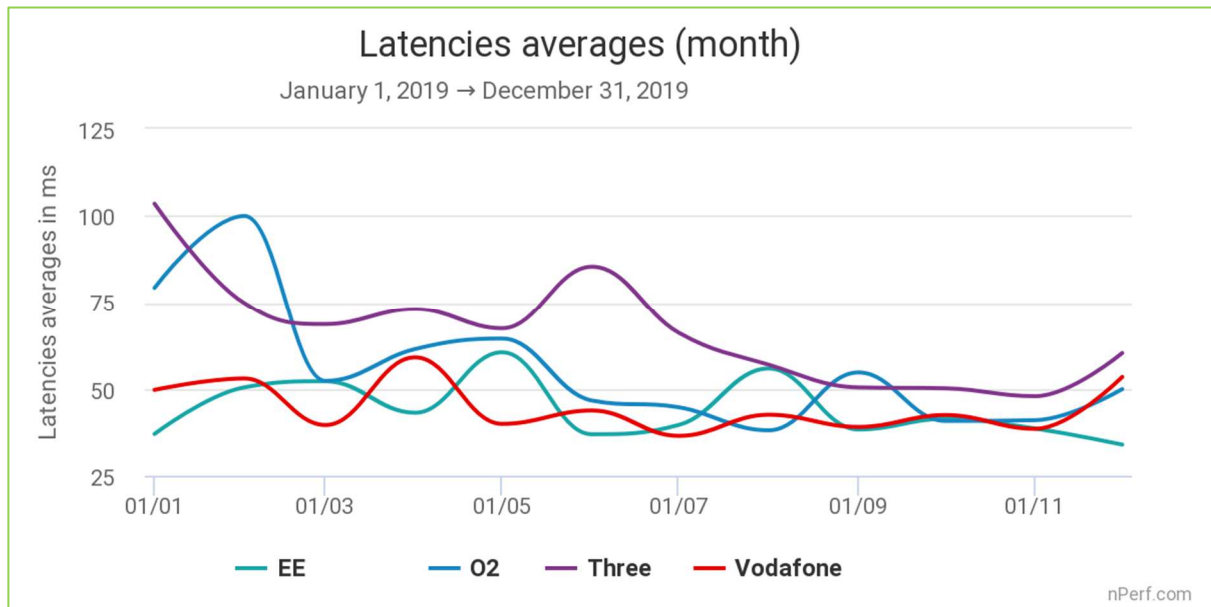

**Vodafone UK has provided the best mobile upload speed during 2019.**

## 2.5 Latency [2G->5G]

*The lowest value is the best.*

**EE and Vodafone UK have provided the best mobile latency during 2019.**

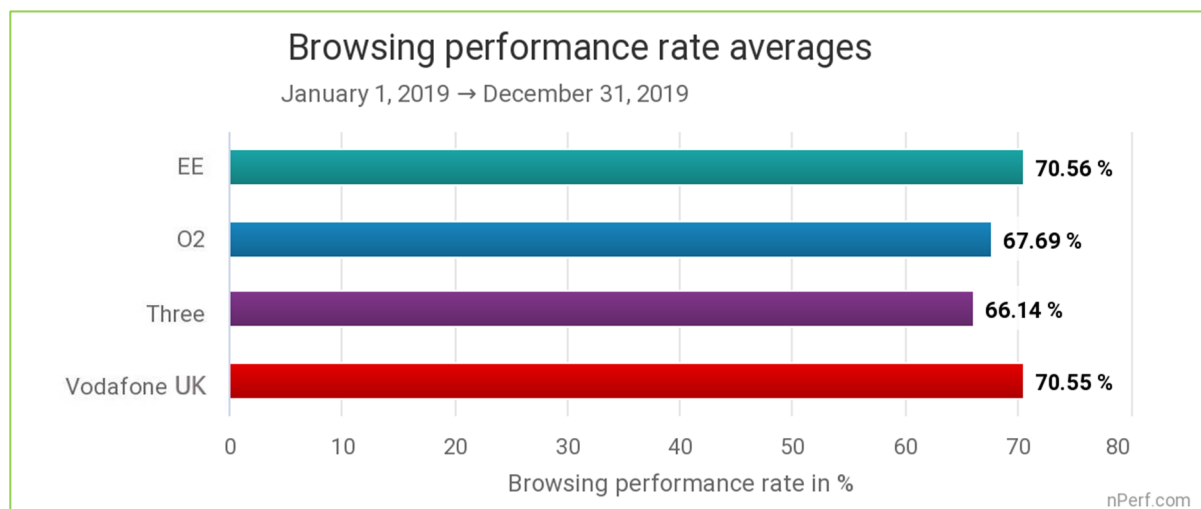

This graph illustrates the ability of providers to maintain a constant latency during the year, regardless of network load (number of connected users).

We note that the gap is narrowing between all operators during last half of the year.

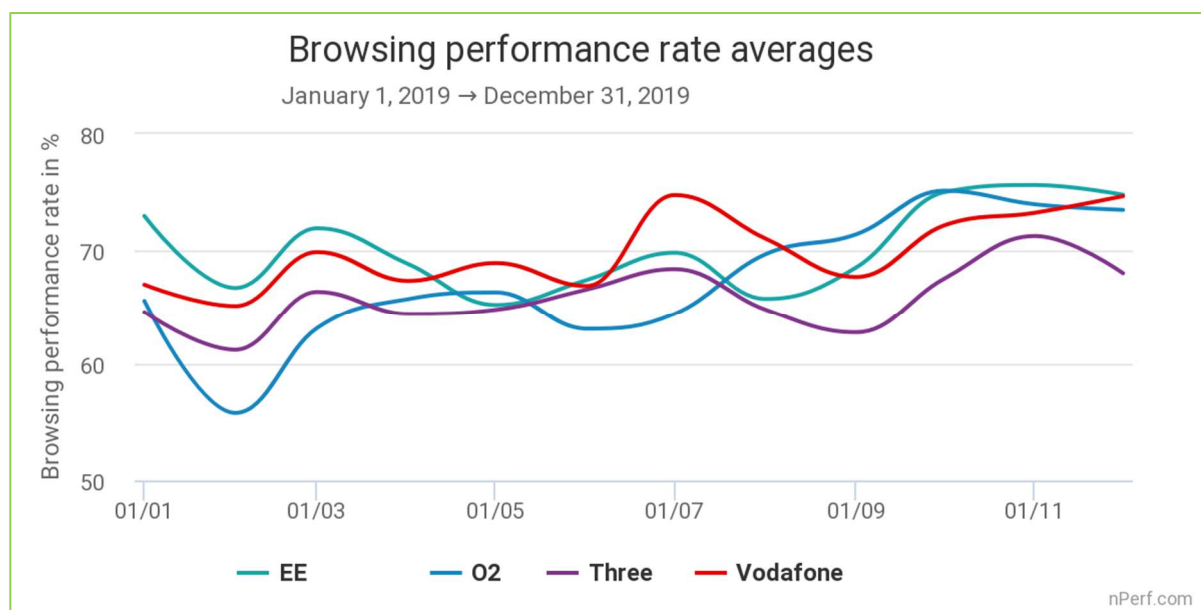

## 2.6 Browsing test [2G->5G]

Average performance of the loading times of the 5 websites most frequented by British internet users (excluding YouTube).

**EE and Vodafone UK have provided the best performance in mobile Internet browsing in 2019.**

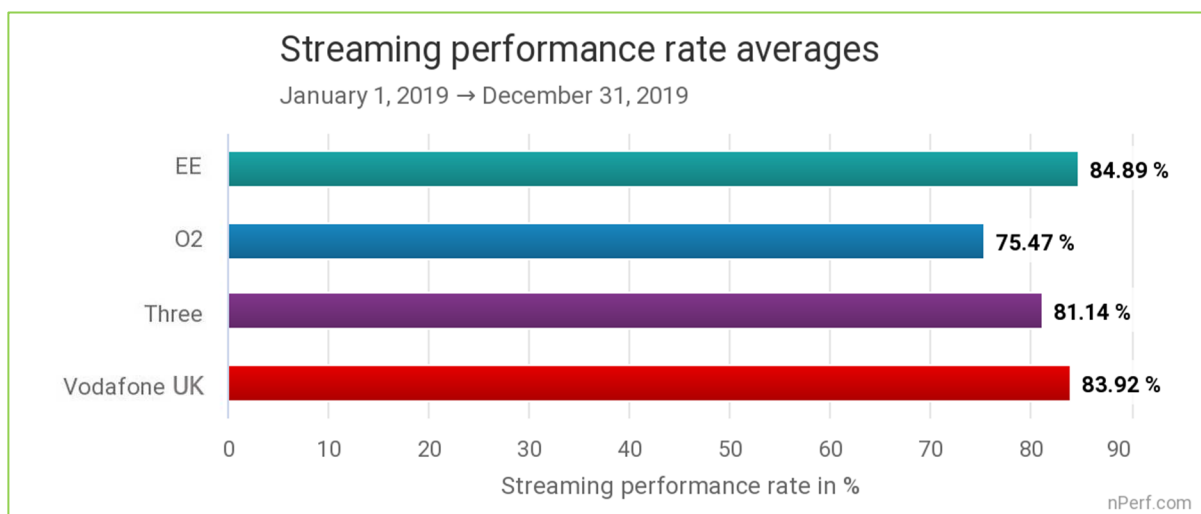

This graph illustrates the ability of providers to maintain a constant browsing performance during the year, regardless of network load (number of connected end-users).

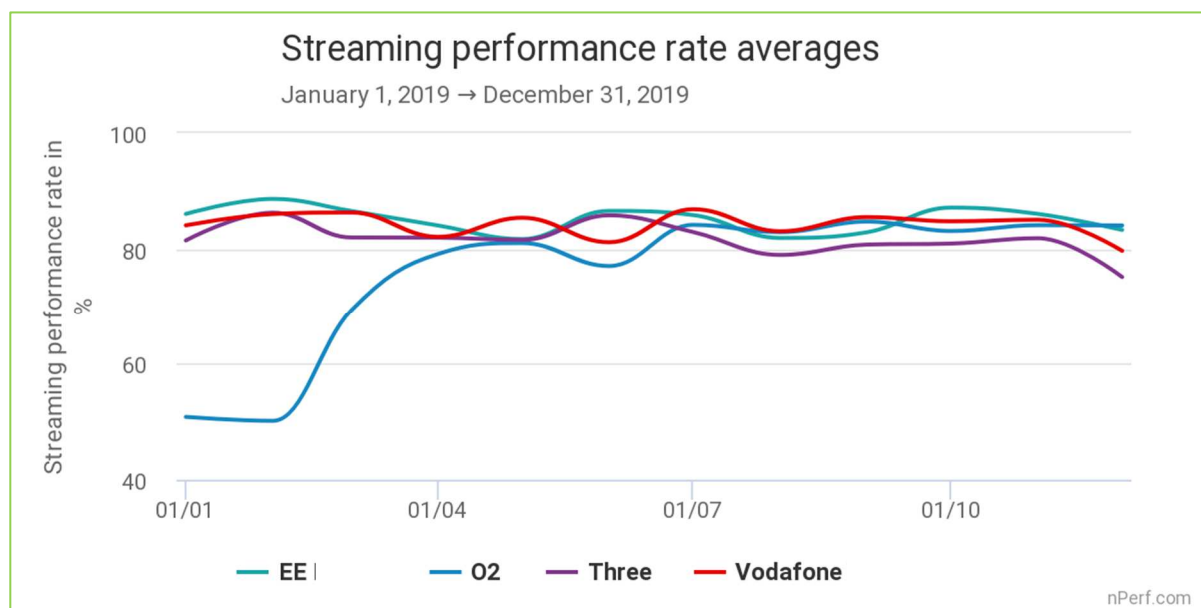

We note that the gap is narrowing between all operators during the last half of the year.

## 2.7 Streaming test [2G->5G]

Measuring the quality of watching a video on the YouTube streaming platform.

**EE and Vodafone UK have provided the best performance in mobile video streaming in 2019.**

9

This graph illustrates the ability of providers to maintain a constant streaming performance during the year, regardless of network load (number of connected end-users).

We note that the gap is narrowing between all operators during the last half of the year.

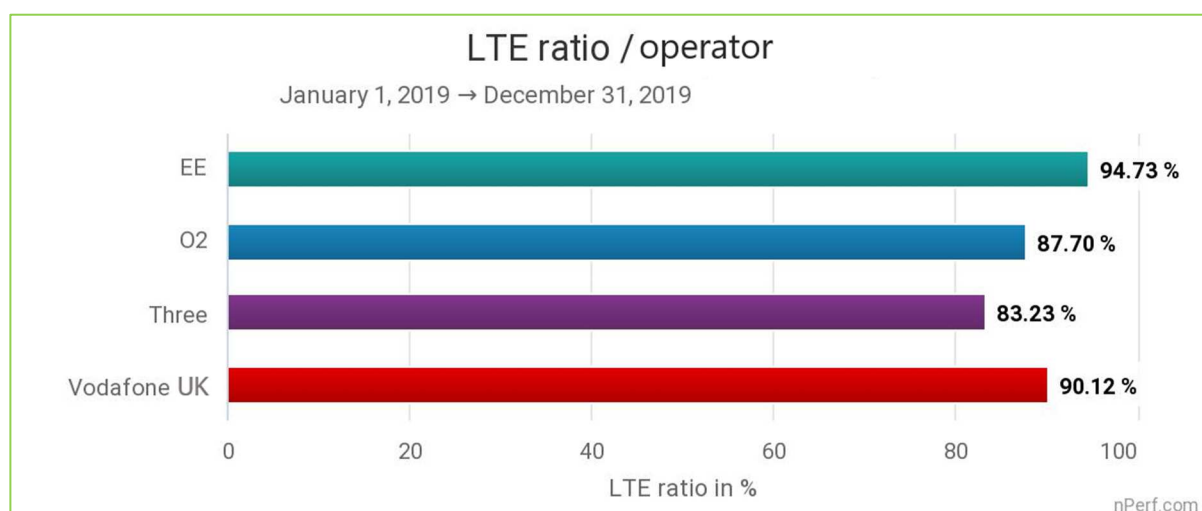

## 2.8 4G connection rate

nPerf data is used to determine the 4G connection rates. These indicators are calculated from test data from nPerf applications.

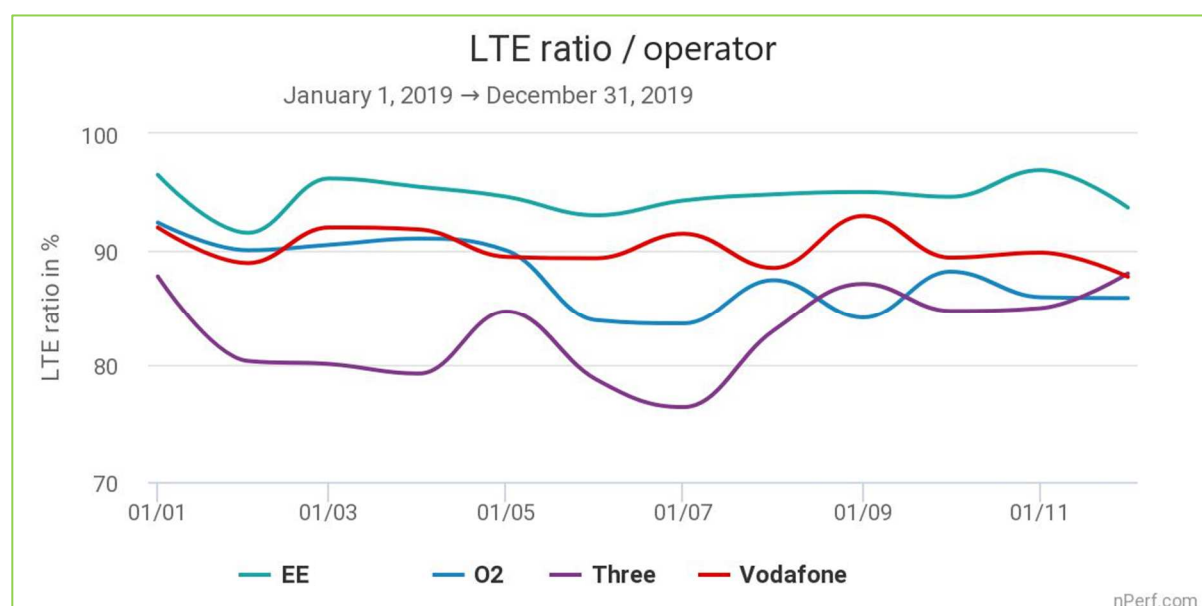

The principle is simple: for each operator, the number of tests performed in 4G on the total number of cellular tests is calculated. For the relevance of the result, all tests carried out on the terminals that do not make it possible to benefit from 4G are excluded beforehand.

Important note: we are unable to distinguish operators' plans. As a result, although they are minimal, users who do not benefit from a 4G plan but who have a 4G mobile plan are not excluded from the results.

Statistics based on 32,061 tests performed on 4G terminals. List of 4G terminals in annex.

**EE got the best 4G/LTE connection rate for 2019.**

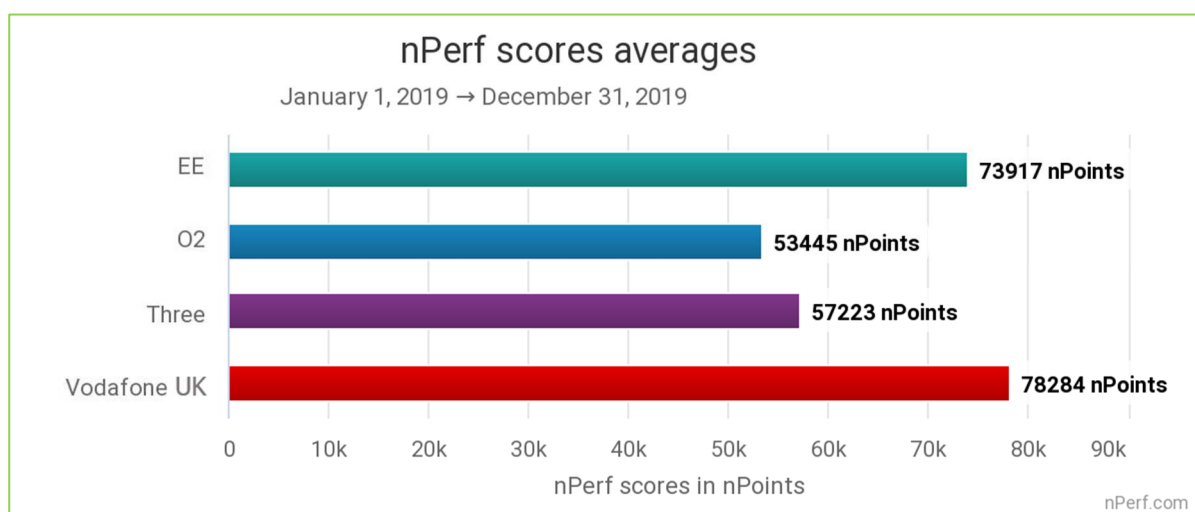

This graph illustrates the evolution of the 4G connection rate throughout the year. The gap is narrowing across all operators.

## 2.9 nPerf score [2G->5G]

The nPerf score, expressed in nPoints, gives an overall picture of the quality of a connection. It takes into account measured speed (2/3 download + 1/3 upload), latency and is equally affected by quality of experience tests (web browsing/streaming). The value of the points concerning throughputs and latency is calculated on a logarithmic scale to better represent the perception of the user.

Thus, this score reflects the overall quality of the connection **felt by the user**.

The results below consider all the previous indicators and therefore all the tests carried out. As technologies are grouped together, the proportion of tests in different technologies strongly impacts this global trend. This shows a general ranking of providers for the whole of UK.

11

**Vodafone UK** provided the Best mobile internet performance 2019.

Thanks to the nPerf application, find this global indicator directly on your smartphone or tablet via the «  Compare » function at the end of the full test. It is updated in real time over 14 rolling days.

### 3 London results

Results from all cell generations (2G to 5G) taken from tests carried out on 4G-compatible terminals.

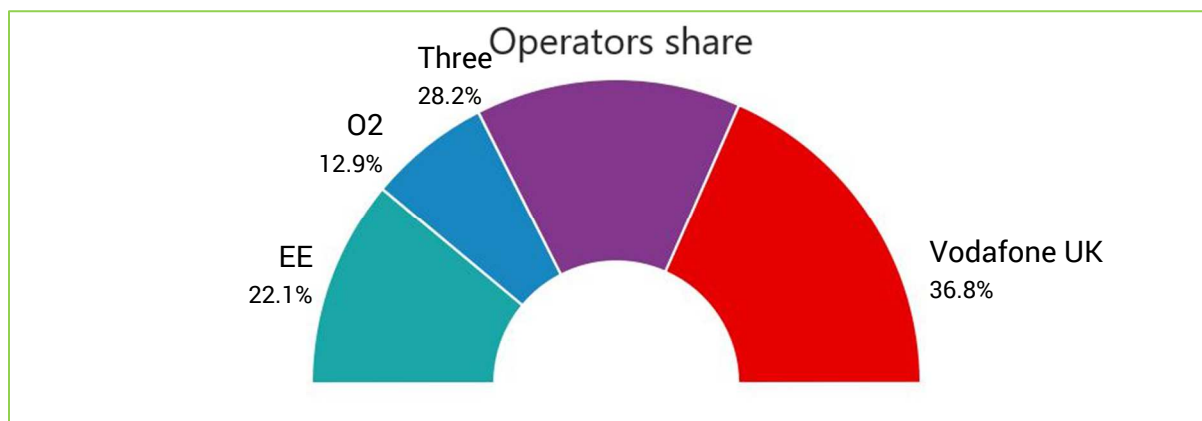

#### 3.1 London: Data amount and distribution

The nPerf application allows the user to perform a full test(\*) or each test separately. Between January 1, 2019 – December 31, 2019, we counted **12,470** unit tests, distributed as follows, after filtering (see § 6.1.3):

Technology	Speed	Browsing	Streaming
[2G -> 5G]	5,613	2,364	1,978

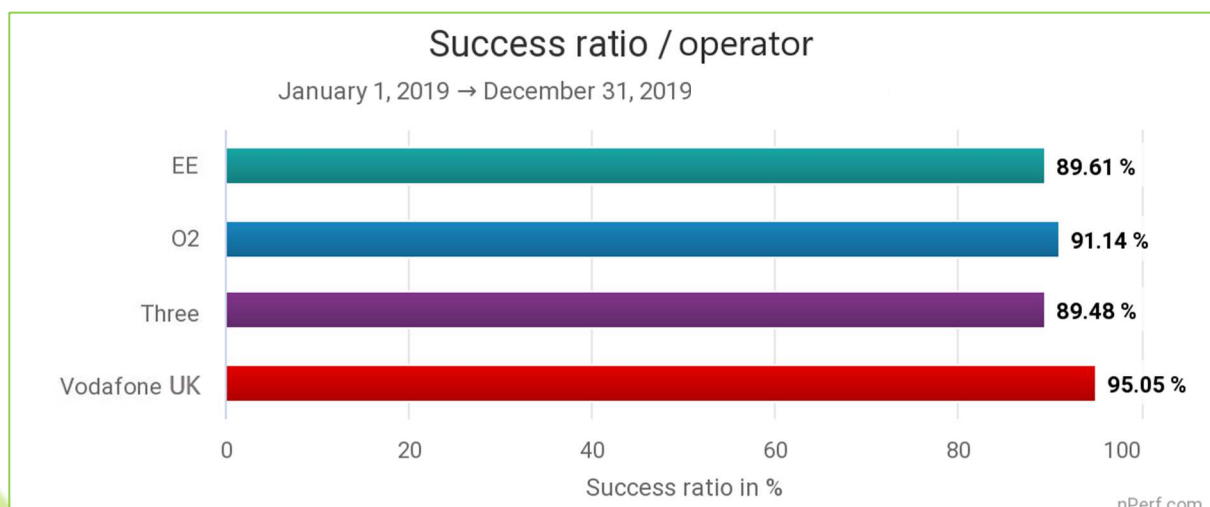

(\*) a full test (speed, web browsing, streaming) = 3 unit tests.

The overall breakdown of the tests per provider is as follows:

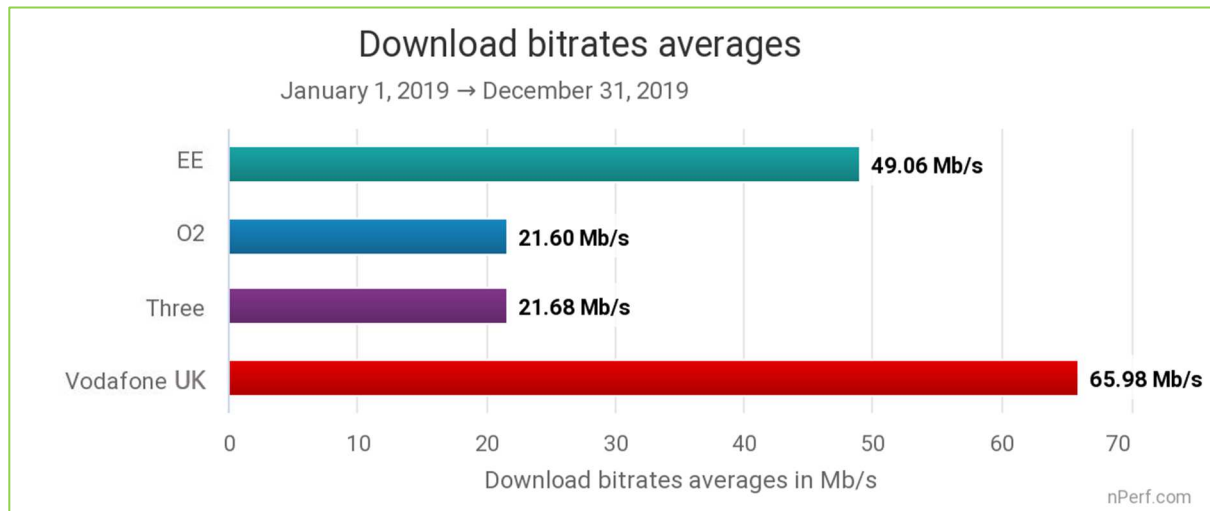

#### 3.2 London: Success rate [2G->5G]

The success rate is the number of successful tests compared to the number of tests performed.

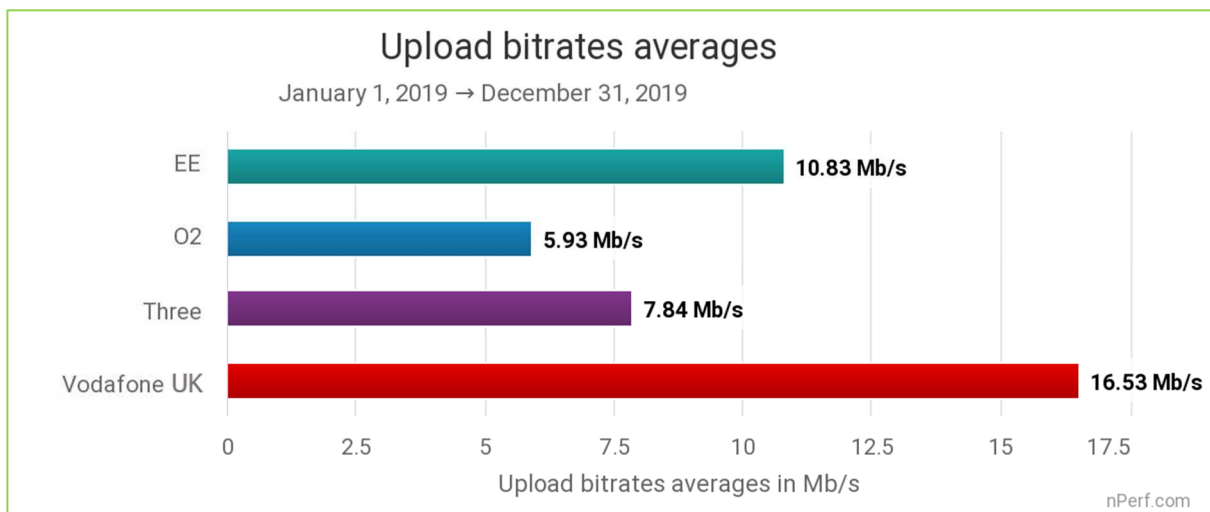

**Vodafone UK has recorded the best success rate in 2019, all technologies combined, in London.**

### 3.3 London: Download speed [2G->5G]

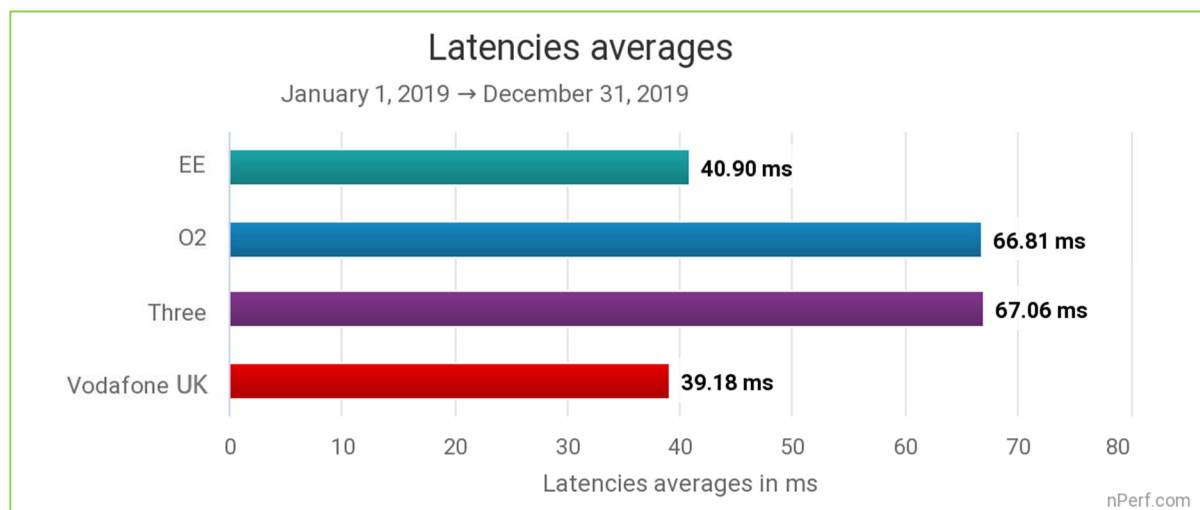

**Vodafone UK has provided the best mobile download speed during 2019 in London.**

### 3.4 London: Upload speed [2G->5G]

**Vodafone UK has provided the best mobile upload speed during 2019 in London.**

### 3.5 London: Latency [2G->5G]

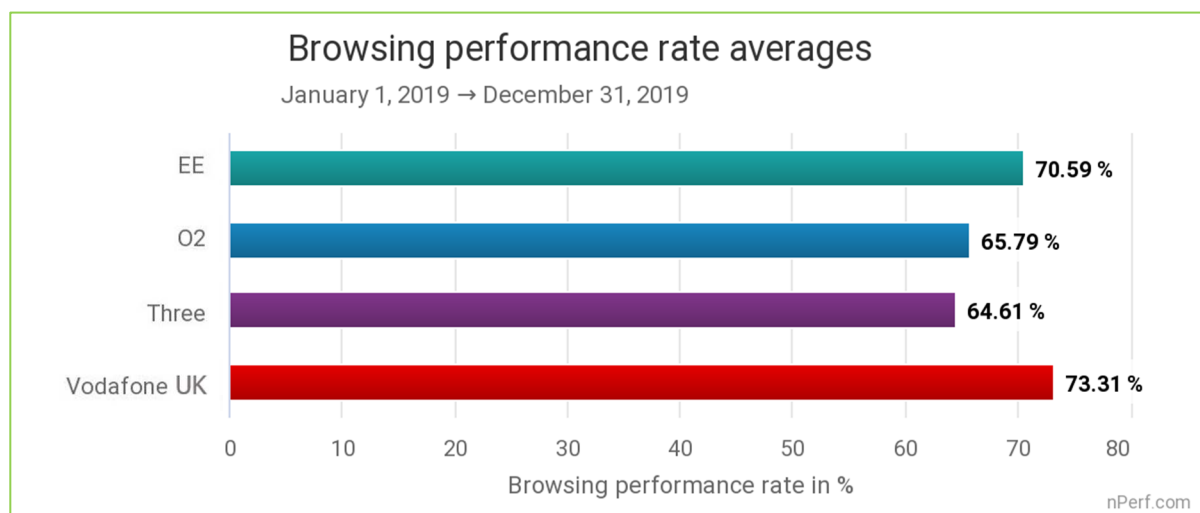

*The lowest value is the best.*

**Vodafone UK has provided the best mobile latency during 2019 in London.**

### 3.6 London: Browsing test [2G->5G]

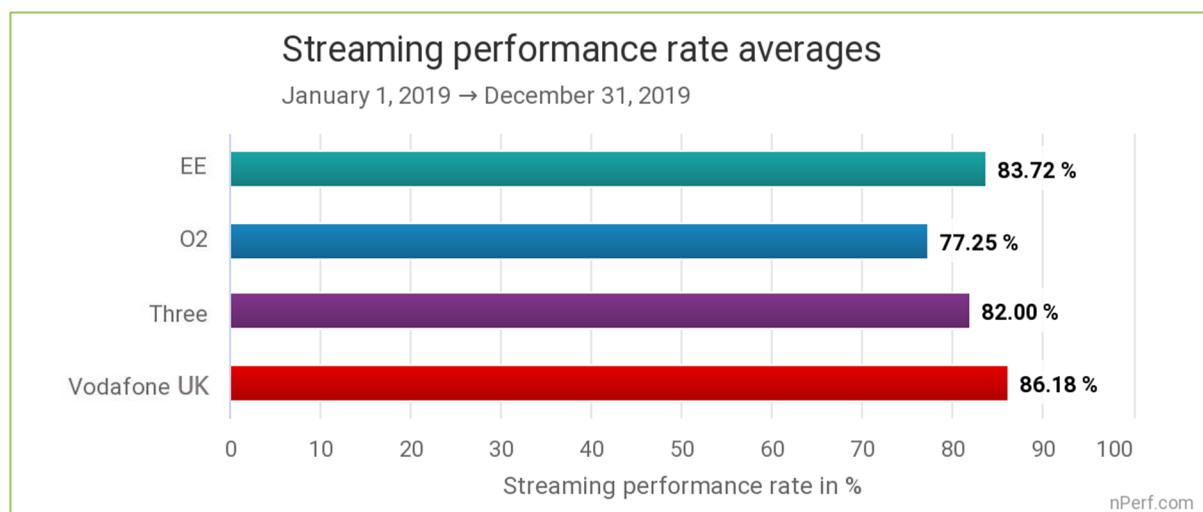

Average performance of the loading times of the 5 websites most frequented by British internet users (excluding YouTube).

**Vodafone UK has provided the best performance in mobile internet browsing in London.**

### 3.7 London: Streaming test [2G->5G]

Measuring the quality of watching a video on the YouTube streaming platform.

**Vodafone UK has provided the best performance in mobile video streaming in London.**

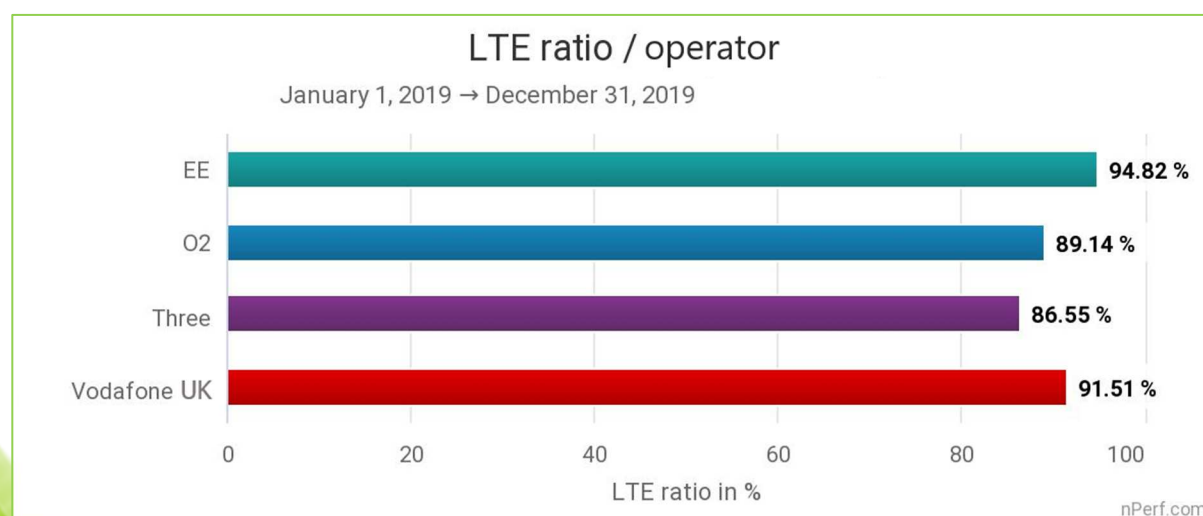

### 3.8 London: 4G connection rate

nPerf data is used to determine the 4G connection rates. These indicators are calculated from test data from nPerf applications.

The principle is simple: for each operator, the number of tests performed in 4G on the total number of cellular tests is calculated. For the relevance of the result, all tests carried out on the terminals that do not make it possible to benefit from 4G are excluded beforehand.

Important note: we do not have the possibility to distinguish operators' plan. As a result, although they are minimal, users who do not benefit from a 4G plan but who have a 4G mobile plan are not excluded from the results.

Statistics based on 8,656 tests performed on 4G terminals. List of 4G terminals in annex.

**EE achieved the best 4G/LTE connection rate for 2019 in London.**

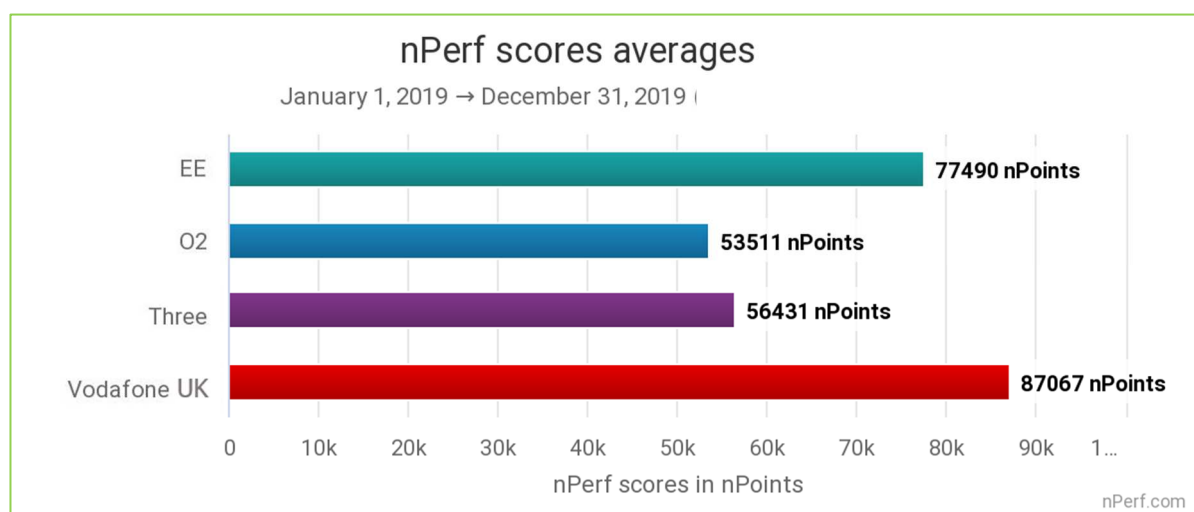

### 3.9 London: nPerf score [2G->5G]

The nPerf score, expressed in nPoints, gives an overall picture of the quality of a connection. It takes into account measured speed (2/3 download + 1/3 upload), latency and is equally affected by quality of experience tests (web browsing/streaming). The value of the points concerning throughputs and latency is calculated on a logarithmic scale to better represent the perception of the user.

Thus, this score reflects the overall quality of the connection **felt by the user**.

The results below consider all the previous indicators and therefore all the tests carried out. As technologies are grouped together, the proportion of tests in different technologies strongly impacts this global trend. This shows a general ranking of providers for the whole of UK.

16

**Vodafone UK provided the Best mobile internet performance 2019.**

## 4 You can also participate in the nPerf test panel

To participate in the panel, simply use the nPerf application, available for free on the Apple AppStore for iPhone and iPad, on Google Play for Android devices and on the Windows Store for Windows 10 Mobile phones.

Download the nPerf App	
Android	<a href="http://android.nperf.com/">http://android.nperf.com/</a>
iOS	<a href="http://ios.nperf.com/">http://ios.nperf.com/</a>
Windows Phone	<a href="http://wp.nperf.com/">http://wp.nperf.com/</a>

Also participate in the Fixed Connections Barometer panel by testing your DSL, cable or fiber optic connection at [www.nPerf.com](http://www.nPerf.com)

## 5 Custom analysis & contact

Do you need further study or want to get the raw data, punctually or automatically, to compile it yourself?

You can contact nPerf via [www.nPerf.com](http://www.nPerf.com) "Contact Us" section or directly from the mobile app.

Phone contact: +33 482 53 34 11

Address: nPerf SAS, 87 rue de Sèze, 69006 LYON, France

**Stay in touch with us, follow us!**

## 6 Appendices

### 6.1 Methodology

#### 6.1.1 The panel

nPerf offers a free application for testing the quality of the Internet connection, downloadable on Android, iOS (Apple) and Windows Phone mobile devices.

Everyone is free to use this app to measure the quality of their mobile connection. All users of the nPerf application form the panel of this study.

Thus, the nPerf study is based on the tens of thousands of tests carried out each month exclusively by the operators' end customers, making it one of the "crowdsourcing" study with the largest panel in UK.

#### 6.1.2 Definitions and objectives

##### 6.1.2.1 Success rate

The success rate is the number of successful tests compared to the number of tests performed.

##### 6.1.2.2 Speed and latency tests

The purpose of the nPerf Speed Test is to measure the maximum capacity of the connection in terms of bit rate and latency.

To achieve this, nPerf simultaneously establishes multiple connections to saturate the bandwidth to accurately measure it.

The speed measurements thus reflect **the maximum capacity** of the connection. This rate may not be representative of the user experience experienced during normal use of the Internet because it is measured only on nPerf servers.

The user experience will be measured by quality of service (QoS) tests.

##### 6.1.2.3 nPerf servers

To ensure maximum user bandwidth at all times, nPerf relies on a network of servers dedicated to this task.

These servers are located with hosts in UK and abroad. The total bandwidth available for UK is greater than 15 Gb/s.

**Local carriers are welcome to install nPerf servers, that's free!**

##### 6.1.2.4 The browsing test

The browsing test allows the user to accurately measure the loading time of the 5 websites most frequented by the British Internet users (YouTube is excluded from this test as it is subject to the following test).

This indicator reflects the quality of navigation perceived by the user. It can however be negatively impacted by the performance of the terminal used, especially if it is old.

It is calculated considering the loading time of the page. A page loaded in 10 seconds or more gets a 0% performance rate and a page loaded instantly gets a performance rate of 100%. For example, a page loaded in 2 seconds will get a performance rate of 80%.

#### 6.1.2.5 YouTube streaming test

The goal of the streaming test is to measure the quality of video viewing on the most popular streaming platform in UK and around the world: YouTube.

It operates under conditions similar to the direct use of YouTube and therefore takes into account the quality of the network between the user and the YouTube servers.

It is calculated considering all the time required to load the video (before or during playback). If the ratio between the duration of the video and the overall reading time (reading + loading) tends to 1 then the performance index will tend towards 100%. And conversely, the more the ratio moves away from 1, the more the index will tend towards 0%.

### 6.1.3 Statistical accuracy

With regard to the total volume of unit tests, the statistical precision used in this publication is:

- ✓ 3% for absolute values
- ✓ 1 point for percentages

If, for a given indicator, one or more operators have results very close to the best, in the confidence interval defined above, these will be share first place.

### 6.1.4 Filtering of test results

The results obtained are subject to automatic and manual checks to avoid duplication and to rule out possible abusive or fraudulent use (massive tests, robots ...). The exclusive nPerf algorithm retains only the relevant tests, thus eliminating biases related to the overrepresentation of certain terminals, users or test locations.

The results are classified by provider. The results for each provider include the tests performed on the partner networks (roaming, pooling).

#### 6.1.4.1 Filtering of devices

In order not to introduce any bias related to the capabilities of the terminals, only the tests carried out on the 4G compatible terminals are retained. The exhaustive list is provided in the appendix.

## 6.2 Complete list of 4G terminals selected for 2019

Samsung Galaxy S4 LTE, Samsung Galaxy S3 LTE, LG Nexus 5, Samsung Galaxy Note 3 LTE, Sony Xperia SP, Sony Xperia Z1, Samsung Galaxy Mega 6.3 LTE, HTC One M7, Samsung Galaxy Note II LTE, Sony Xperia Z, Samsung Galaxy Express, HTC One mini, Samsung Galaxy S4 LTE+, Samsung Galaxy S4 Mini LTE, LG G2, Samsung Galaxy Note LTE 10.1, Samsung Galaxy Tab 3 10.1 LTE, HTC One X+, Bouygues Telecom Ultym 4, LG Optimus G, HTC One SV, Asus Nexus 7, Samsung Galaxy S4 LTE (Google), Sony Xperia Z Ultra, Samsung Galaxy S4 Active, LG Optimus True HD, HTC Desire 601, Samsung Galaxy Ace 3 LTE, Samsung Galaxy S4 LTE Advanced, Samsung Galaxy Note II LTE, Alcatel One Touch Idol S, Samsung Galaxy Note II LTE, Bouygues Telecom BS501, Sony Xperia V, Samsung Galaxy Note II LTE, LG Optimus F6, HTC One max, Apple iPhone 5, Apple iPhone 5S, Apple iPhone 5C, Apple iPad Air, Apple iPad mini 2, Apple iPad 4, Nokia Lumia 920, Nokia Lumia 925, Nokia Lumia 1020, Nokia Lumia 820, Nokia Lumia 625, Nokia Lumia 1520, Nokia Lumia 1320, Sony Xperia Z1 Compact, Huawei Ascend G740, Samsung Galaxy S5, Sony Xperia Z2, HTC One M8, HTC One VX, Motorola Moto X, RIM BlackBerry Z10, LG G3, Nokia Lumia 930, Motorola Moto G 4G, Nokia Lumia 635, Sony Xperia M2, HTC One mini 2, HTC Desire 610, Alcatel One Touch Idol 2 S, Samsung Galaxy S5 LTE-A, HTC Desire 816, Samsung Galaxy S5 LTE-A, ZTE Grand S Flex, Apple iPhone 6, Apple iPhone 6+, Sony Xperia Z3, Sony Xperia Z3 Compact, Samsung Galaxy Alpha LTE-A, Samsung Galaxy Alpha LTE, Samsung Galaxy Note 4 LTE, Samsung Galaxy Note 4 LTE-A, Motorola Moto X 2014, OnePlus One, Motorola Nexus 6, Apple iPad Air 2, Apple iPad mini 3, Wiko WAX LTE, Samsung Galaxy Core LTE, Samsung Galaxy S5 mini, Samsung Galaxy Note 3 Lite, Samsung Galaxy S4 VE, Wiko Rainbow 4G, Archos 50 Helium 4G, Archos 50b Helium 4G, Archos 45 Helium 4G, Archos 45b Helium 4G, Samsung Galaxy Grand II LTE, Nokia Lumia 735, Nokia Lumia 830, Nokia Lumia 822, Nokia Lumia 928, Nokia Lumia 636, Motorola Droid Turbo, Samsung Galaxy Note Edge, Samsung Galaxy S5 Active, Huawei Ascend Mate 7, Huawei Honor 6, Huawei Ascend G620s, Samsung Galaxy Ace Style LTE, Meizu MX4, Meizu MX4 Pro, Sony Xperia E3, Sony
