# 1 Summary

## 1.1 2G/3G/4G nPerf Score

Results, all cellular generations combined, from tests performed on 4G-compatible terminals.

## The best mobile network in H1 2018 :

**Smartfren has provided the best mobile Internet services in the first half of 2018.**

### 1.2 Our analysis

During the first six months of 2018, nPerf users in Indonesia have collected 319,552 tests, including speed tests, streaming tests and browsing tests.

#### Smartfren takes first place in the nPerf ranking

Smartfren has dramatically improved the quality of its network, including increasing throughputs and decreasing latency. This propels him to the top of the ranking.

Indeed, with a download speed of 13,94 Mb/s, Smartfren is far away from any other operators. Telkomsel who lost his first place is second with a download speed of 6,27 Mb/s, less than twice Smartfren speed ! Smartfren has got a very good latency performance which is an important criteria for gamers.

## Indonesia Networks suffer from capacities

When we look at the download speed we notice that most of the mobile carriers deliver a speed that is limited for intensive uses such as streaming in High definition.

## XL Axiata back in the competition

Note that XL Axiata has also made good progress this semester and catches up with Telkomsel, which is falling in its performance.

## Big suspense for the second half

When we look at the performance of Smartfren, XI Axiata, Bolt! And Telkomsel since the beginning of May, we notice that the four operators increased their performances and are very close to each other's. This suggest that the battle for the network performance will be hard for the end of the year.

# 2 Overall results 2G/3G/4G

Results, all cellular generations combined, from tests performed on 4G-compatible terminals.

## 2.1 Data amount and distribution

The nPerf application allows the user to perform a full test or each test separately. Between **January 1, 2018** and **June 30, 2018**, we counted **319.552** tests, distributed as follows, after filtering (see §5.1.3):

Technology	Speed	Browsing	Streaming
2G/3G/4G	141.107	52.310	41.622

The overall breakdown of the tests per provider is as follows:

## 2.2 Success rate 2G/3G/4G

The success rate is the number of successful tests compared to the number of tests performed.

Smartfren has provided the best average success ratio during the first half of 2018.

Evolution of the success rate throughout the first semester. We can note technical issues with Telkomsel and BOLT's networks in March and May.

## 2.3 Download speed 2G/3G/4G

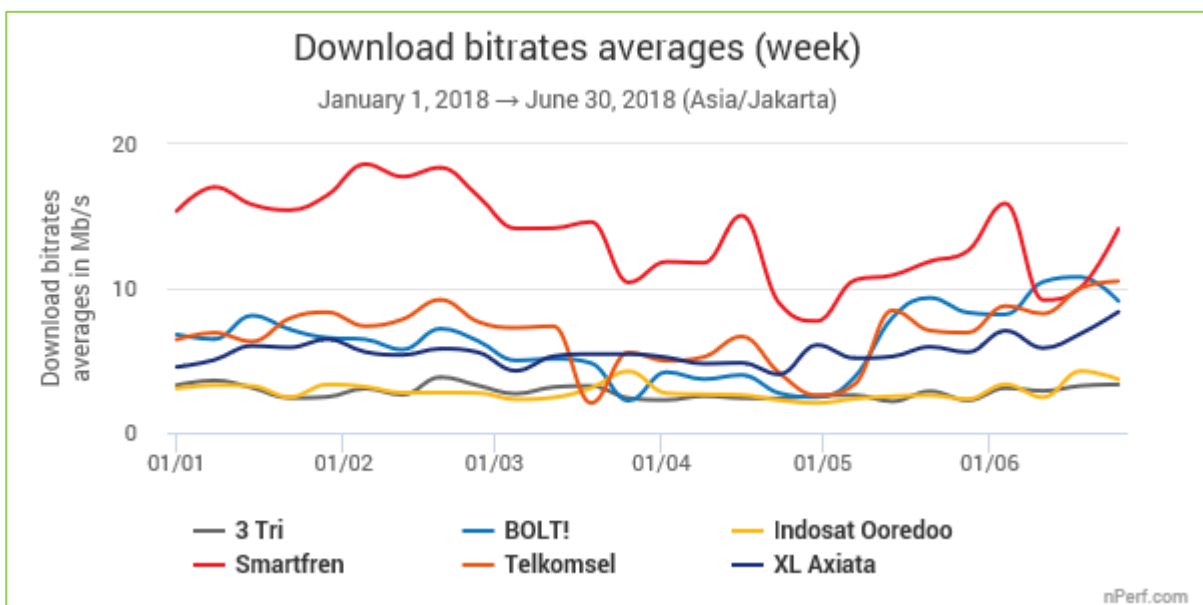

*The highest value is the best.*

**Smartfren has provided the best average download speed during the first half of 2018.**

Smartfren increased by 45% his download speed rate compared to 2017, and XL Axiata by 24%.

BOLT! And Telkomsel dropped on average.

*The highest value is the best.*

This graph illustrates the ability of providers to maintain a constant download speed during the year, regardless of network load (number of connected clients).

Smartfren's speed is still high but it's going down in the last few months when BOLT! , Telkomsel and XL Axiata go back. Nice competition to follow next semester !

The highest value is the best.

This graph illustrates the ability of providers to ensure a constant download speed throughout the day, regardless of network load (number of connected clients). We note for all operators a significant decline in download speed late in the day.

## 2.4 Upload speed 2G/3G/4G

The highest value is the best.

**Telkomsel has provided the best upload speed in the first half of 2018, as in 2017.**

Note nevertheless the very nice progressions of Smartfren, XL Axiata and 3 Tri while Telkomsel has significantly lowered its performance on average.

The highest value is the best.

This graph illustrates the ability of providers to maintain a constant upload speed during the year, regardless of network load (number of connected clients).

As for the downloads, in the last few months, Telkomsel and XL Axiata increased their performances in uploads.

## 2.5 Latency 2G/3G/4G

The lowest value is the best.

**Smartfren has provided the best average latency during the first half of 2018.**

XL Axiata, 3 Tri and Smartfren have significantly improved their latency.

*The lowest value is the best.*

This graph illustrates the ability of providers to maintain a constant latency during the year, regardless of network load (number of connected clients).

## 2.6 Browsing test 2G/3G/4G

Average performance of the loading times of the 5 websites most frequented by Indonesian Internet users (excluding YouTube).

*The highest value is the best.*

**During the first half of 2018, Telkomsel has proposed the best performance in Internet browsing, as in 2017.**

The highest value is the best.

This graph illustrates the ability of providers to maintain a constant browsing performance during the year, regardless of network load (number of connected clients).

## 2.7 Streaming test 2G/3G/4G

Measuring the quality of watching a video on the YouTube streaming platform.

The highest value is the best.

**XL Axiata and BOLT! have proposed the best rate of performance in video streaming during the first half of 2018.**

This graph illustrates the ability of providers to maintain a constant streaming performance during the year, regardless of network load (number of connected clients).

## 2.8 4G connexion rate

nPerf data is used to determine the 4G and 4G+ connection rates. These indicators are calculated from test data from nPerf applications.

The principle is simple: for each operator, the number of tests performed in 4G or 4G+ on the total number of cellular tests is calculated. For the relevance of the result, all tests carried out on the terminals that do not make it possible to benefit from 4G are excluded beforehand.

Important note: we do not have the possibility to distinguish commercial offers. As a result, although they are few, users who do not benefit from a 4G plan but who have a 4G mobile are not excluded from the results.

Statistics based on 158,139 tests performed on 4G terminals. List of 4G terminals in annex.

**BOLT! and Smartfren have got the best 4G connection rate in the first half of 2018.**

This graph illustrates the evolution of the 4G connection rate throughout the first half of 2018.

## 2.9 2G/3G/4G nPerf Score

The nPerf score, expressed in nPoints, gives an overall picture of the quality of a connection. It takes into account measured bit rates (2/3 on downloads + 1/3 on uploads), latency and is affected by QoE tests equally (navigation / streaming). The value of the points for the rates and the latency is calculated on a logarithmic scale to better represent the perception that has the user.

Thus, this score reflects the overall quality of the connection **felt by the user**.

Please note that the calculation formula for the score has evolved on January 1, 2018, so it is not possible to compare the nPerf scores in this publication with those of the barometers for the previous years.

The results below consider all the previous indicators and therefore all the tests carried out. As technologies are grouped together, the proportion of tests in different technologies strongly impacts this global trend. This shows a general ranking of providers for the whole of Indonesia.

*The highest value is the best.*

## The best mobile network in H1 2018 :

**Smartfren has provided the best mobile Internet services in the first half of 2018.**

Thanks to the nPerf application, find this global indicator directly on your smartphone or tablet via the « Compare » function at the end of the full test. It is updated in real time over 14 rolling days.

Evolution of the overall average score throughout the first half of 2018.

Looking at the trends of the last 2 months, we can predict a good competition next semester !

### 3 You too, participate in the nPerf panel!

To participate in the panel, simply use the nPerf application, available for free on the Apple AppStore for iPhone and iPad, on Google Play for Android devices and on the Windows Store for Windows 10 Mobile phones.

Download the nPerf App	
Android	<a href="http://android.nperf.com/">http://android.nperf.com/</a>
iOS	<a href="http://ios.nperf.com/">http://ios.nperf.com/</a>
Windows Phone	<a href="http://wp.nperf.com/">http://wp.nperf.com/</a>

Also participate in the Fixed Connections Barometer panel by testing your DSL, cable or fiber optic connection at [www.nPerf.com](http://www.nPerf.com).

### 4 Custom analysis & contact

Do you need further study or want to get the raw data, punctually or automatically, to compile it yourself?

You can contact nPerf via [www.nPerf.com](http://www.nPerf.com) "Contact Us" section or directly from the mobile app.

**Phone contact: +33 482 53 34 11**

**Address: nPerf SAS, 87 rue de Sèze, 69006 LYON, France**

## 5 Annexes

### 5.1 Methodology

#### 5.1.1 The panel

nPerf offers a free application for testing the quality of the Internet connection, downloadable on Android, iOS (Apple) and Windows Phone mobile devices.

Everyone is free to use this app to measure the quality of their mobile connection. All users of the nPerf application form the panel of this study.

Thus, the nPerf study is based on the tens of thousands of tests carried out each month exclusively by the operators' end customers., making it the "crowdsourcing" study with the largest panel in Indonesia.

#### 5.1.2 Definitions and goals

##### 5.1.2.1 Success rate

The success rate of access to a mobile network is calculated by dividing the number of successful attempts by the total number of attempts made.

##### 5.1.2.2 Speed and latency tests

The purpose of the nPerf Speed Test is to measure the maximum capacity of the connection in terms of bit rate and latency.

To achieve this, nPerf simultaneously establishes multiple connections to saturate the bandwidth to accurately measure it.

The speed measurements thus reflect **the maximum capacity** of the connection. This rate may not be representative of the user experience experienced during normal use of the Internet because it is measured only on nPerf servers.

The user experience will be measured by quality of service (QoS) tests.

##### 5.1.2.3 nPerf servers

To ensure maximum user bandwidth at all times, nPerf relies on a network of servers dedicated to this task.

These servers are located with hosts in Indonesia and abroad. nPerf has also installed dedicated servers directly at Indonesia providers Smartfren and Bolt! to maximize measurement reliability. The other providers are invited to contact us to setup a free nPerf server in their network.

The total bandwidth available for Indonesia is greater than 6 Gb/s.

##### 5.1.2.4 The browsing test

The browsing test allows the user to accurately measure the loading time of the 5 websites most frequented by Indonesian Internet users (YouTube is excluded from this test as it is subject to the following test).

This indicator reflects the quality of navigation perceived by the user. It can however be negatively impacted by the performance of the terminal used, especially if it is old.

It is calculated considering the loading time of the page. A page loaded in 10 seconds or more gets a 0% performance rate and a page loaded instantly gets a performance rate of 100%. For example, a page loaded in 2 seconds will get a performance rate of 80%.

#### 5.1.2.5 YouTube streaming test

The goal of the streaming test is to measure the quality of video viewing on the most popular streaming platform in Indonesia and around the world: YouTube.

It operates under conditions similar to the direct use of YouTube and therefore takes into account the quality of the network between the user and the YouTube servers.

It is calculated considering all the time required to load the video (before or during playback). If the ratio between the duration of the video and the overall reading time (reading + loading) tends to 1 then the performance index will tend towards 100%. And conversely, the more the ratio moves away from 1, the more the index will tend towards 0%.

#### 5.1.3 Filtering of test results

The results obtained are subject to automatic and manual checks to avoid duplication and to rule out possible abusive or fraudulent use (massive tests, robots ...). The exclusive nPerf algorithm retains only the relevant tests, thus eliminating biases related to the overrepresentation of certain terminals, users or test locations.

The results are classified by provider. The results for each provider include the tests performed on the partner networks (roaming, pooling).

In order not to introduce any bias related to the capabilities of the terminals, only the tests carried out on the 4G compatible terminals are retained. The exhaustive list is provided in the appendix.

#### 5.1.4 Modification of the methodology in 2018

As of January 1, 2018, the formula for calculating the nPerf score evolves to better represent the user's feeling. The new formula takes into account latency and gives more importance to upload and user experience (browsing, streaming). This new formula is applied to all tests carried out from January 1, 2018.

The new scores thus calculated are not comparable with those for previous years.

## 5.2 Complete list of 4G terminals selected for H1 2018

Samsung Galaxy S4 LTE, Samsung Galaxy S3 LTE, LG Nexus 5, Samsung Galaxy Note 3 LTE, Sony Xperia SP, Sony Xperia Z1, Samsung Galaxy Mega 6.3 LTE, HTC One M7, Samsung Galaxy Note II LTE, Sony Xperia Z, Samsung Galaxy Express, HTC One mini, Samsung Galaxy S4 LTE+, Samsung Galaxy S4 Mini LTE, LG G2, Samsung Galaxy Note LTE 10.1, Samsung Galaxy Tab 3 10.1 LTE, HTC One X+, Bouygues Telecom Ulytm 4, LG Optimus G, HTC One SV, Asus Nexus 7, Samsung Galaxy S4 LTE (Google), Sony Xperia Z Ultra, Samsung Galaxy S4 Active, LG Optimus True HD, HTC Desire 601, Samsung Galaxy Ace 3 LTE, Samsung Galaxy S4 LTE Advanced, Samsung Galaxy Note II LTE, Alcatel One Touch Idol S, Samsung Galaxy Note II LTE, Bouygues Telecom BS501, Sony Xperia V, Samsung Galaxy Note II LTE, LG Optimus F6, HTC One max, Apple iPhone 5, Apple iPhone 5S, Apple iPhone 5C, Apple iPad Air, Apple iPad mini 2, Apple iPad 4, Nokia Lumia 920, Nokia Lumia 925, Nokia Lumia 1020, Nokia Lumia 820, Nokia Lumia 625, Nokia Lumia 1520, Nokia Lumia 1320, Sony Xperia Z1 Compact, Huawei Ascend G740, Samsung Galaxy S5, Sony Xperia Z2, HTC One M8, HTC One VX, Motorola Moto X, RIM BlackBerry Z10, LG G3, Nokia Lumia 930, Motorola Moto G 4G, Nokia Lumia 635, Sony Xperia M2, HTC One mini 2, HTC Desire 610, Alcatel One Touch Idol 2 S, Samsung Galaxy S5 LTE-A, HTC Desire 816, Samsung Galaxy S5 LTE-A, ZTE Grand S Flex, Apple iPhone 6, Apple iPhone 6+, Sony Xperia Z3, Sony Xperia Z3 Compact, Samsung Galaxy Alpha LTE-A, Samsung Galaxy Alpha LTE, Samsung Galaxy Note 4 LTE, Samsung Galaxy Note 4 LTE-A, Motorola Moto X 2014, OnePlus One, Motorola Nexus 6, Apple iPad Air 2, Apple iPad mini 3, Wiko WAX LTE, Samsung Galaxy Core LTE, Samsung Galaxy S5 mini, Samsung Galaxy Note 3 Lite, Samsung Galaxy S4 VE, Wiko Rainbow 4G, Archos 50 Helium 4G, Archos 50b Helium 4G, Archos 45 Helium 4G, Archos 45b Helium 4G, Samsung Galaxy Grand II LTE, Nokia Lumia 735, Nokia Lumia 830, Nokia Lumia 822, Nokia Lumia 928, Nokia Lumia 636, Motorola Droid Turbo, Samsung Galaxy Note Edge, Samsung Galaxy S5 Active, Huawei Honor 6, Huawei Honor 6, Huawei Ascend G620s, Samsung Galaxy Ace Style LTE, Meizu MX4, Meizu MX4 Pro, Sony Xperia E3, Sony Xperia T3, Wiko Birdy, Wiko Highway 4G, Samsung Galaxy S6, Samsung Galaxy S6 Edge, HTC One M9, Asus Zenfone 2, Samsung Galaxy Grand Prime, Archos 50 Diamond, LG G3 S, Samsung Galaxy A3, Samsung Galaxy Tab 4 10.1" LTE, Samsung Galaxy Tab S 10.5" LTE, Samsung Galaxy Core Prime, Samsung Galaxy A5, Wiko Ridge Fab 4G, Wiko Ridge 4G, Motorola Moto G2, Microsoft Lumia 640 XL LTE Dual SIM, Huawei Ascend G7, OnePlus Two, Apple iPhone 6s, Apple iPhone 6s+, Samsung Galaxy Note 5, Samsung Galaxy J2, Samsung Galaxy J7, Samsung Galaxy J5, Samsung Galaxy J1 Ace, Samsung Galaxy A8, Motorola Moto X Style, Motorola Moto X Pure Edition, Motorola Moto G3, Samsung Galaxy S6 Edge+, Sony Xperia Z3+, LG G4, Huawei Honor 7, LG Nexus 5X, Huawei Nexus 6P, Hisense Andromax R, Hisense PureShot+, Hisense PureShot, Huawei P8lite, Huawei P8, Sony Xperia Z5 Cat6, Sony Xperia M4 Aqua Dual, Sony Xperia Z5 Compact Cat6, Sony Xperia M4 Aqua, Sony Xperia M2 Aqua, Sony Xperia C5, Sony Xperia E4g, Samsung Grand Prime VE,
