# 1 Summary

## 1.1 KPIs and nPerf scores

### 1.1.1 Global results (2G → 5G)

3

**Vodafone provided the best mobile Internet performances in Ireland in 2022.**

### 1.1.2 5G focus

Tests performed in 5G, on compatible terminals allowing the identification of the 5G technology (Android only).

The image shows a screenshot of the nPerf barometer 2022 results for 5G cellular connections in Ireland. The table compares the performance of Three, Vodafone, and eir across seven metrics. Three and Vodafone are highlighted as the top performers with star icons next to their 5G nPerf scores.

|                            | Three     | Vodafone  | eir     |
|----------------------------|-----------|-----------|---------|
| ✓ Success ratio (%)        | 95.50     | 97.31     | 94.63   |
| ▼ Download bitrate (Mb/s)  | 288.37    | 188.06    | 148.12  |
| ▲ Upload bitrate (Mb/s)    | 41.65     | 72.42     | 26.91   |
| ⏮ Latency (ms)             | 20.62     | 23.45     | 24.87   |
| 🌐 Web browsing (%)         | 83.88     | 87.04     | 79.94   |
| 📺 YouTube streaming (%)    | 92.19     | 89.88     | 90.51   |
| 🏆 5G nPerf score (nPoints) | ★ 133 716 | ★ 130 149 | 114 595 |

**Three and Vodafone provided the best 5G Internet performances in Ireland in 2022.**

## 1.2 Our analysis

In 2022 in Ireland, nPerf users have made **37.545 connection tests** (including speed, browsing and streaming tests) through the nPerf mobile app (iOS, Android). With this kind of tests, nPerf measures the real performance. At nPerf, we consider that the customer experience on a mobile network is not only based on download speed, but also on other uses such as streaming and browsing.

This publication includes the 5G results.

### **Vodafone, best mobile carrier on mobile Internet services.**

With a score of 105.970 nPoints, Vodafone is the leader ahead Three, number two, and then eir.

In 2022, Vodafone wins on the following nPerf indicators, notably taking over the lead on upload speeds and customer experience:

- **Best success rate** with 96%
- **Best upload speed** with 35 Mbit/s
- **Best browsing experience** with a performance rate of 83 %
- **Best streaming experience** with a performance rate of 86 %

Three provided the best download speeds in the country while eir the best latency.

Regarding 5G, Three and Vodafone are tied for the lead. Concerning Three, by having provided the best 5G download speed (288 Mbit/s) and the best 5G latency around 20 ms.

A great battle in perspective is announced for 2023!

## 2 Overall results (2G → 5G)

Results, all cellular generations included, of the tests carried out on 4G compatible terminals.

### 2.1 Data volume and distribution

The nPerf application allows the user to perform a full test (\*), or each test separately. Between **January 1<sup>st</sup>, 2022** and **December 31<sup>st</sup>, 2022** we counted in Ireland, after filtering (see § 6.1.4), **23.707 unit tests**.

| Technology | Speed  | Browsing | Streaming | Total  |
|------------|--------|----------|-----------|--------|
| 2G → 5G    | 10.319 | 6.847    | 6.541     | 23.707 |

(\*) one full test (speed, web browsing, streaming) = 3 unit tests

The overall distribution of the tests per provider is as follows:

### 2.2 Success rate

*The highest value is the best.*

**Vodafone recorded the best success rate over the last year.**

Thus, it's slightly more likely to successfully pass a nPerf test when using Vodafone's network, although this probability is very high (9 on 10) for its competitors too.

## 2.3 Download speed

*The highest speed is the best.*

**Three subscribers enjoyed the best average mobile download speed over the last year.**

By surpassing the 100 Mb/s threshold on average, and being the only one to do so, Three wins our ranking in 2022. Vodafone only reaches the second position, finishing 15 Mb/s behind the leader. eir Mobile closes our ranking, surrounding 67 Mb/s.

7

The graph above shows the *monthly* evolution of the average bitrate over the period.

While eir Mobile's performance gradually declined throughout the last half of the year, Three performed very well in September and November, in particular. Vodafone seems pretty stable in between its rivals since may, after leading the battle until last April.

## 2.4 Upload speed

*The highest speed is the best.*

**Vodafone subscribers enjoyed the best average mobile upload speed over the last year.**

On this indicator, Vodafone is unquestionably the leader. This ISP recorded a twice as fast upload average speed than the second classified, Three. Again, eir Mobile ends in the third position.

The graph above shows the *monthly* evolution of the average bitrate over the period.

It is worth noting that uplink speeds, for each operator, did not increase overall during the year in Ireland. Vodafone's dominance is clear from the beginning to the end of the period.

## 2.5 Latency

*The shortest time is the best.*

**eir subscribers enjoyed the best average mobile latency over the last year.**

This is one KPI where the results are very close between operators. eir Mobile is slightly ahead of the pack and wins its only victory in our barometer. However, its two rivals are close behind, to the point where the last ranked operator, Vodafone, shows a good latency, still under 30ms on average, and only 1.2ms slower than the winner.

The graph above shows the *monthly* evolution of the average latency over the period.

Despite its victory, eir shows a small decline from last August onwards, and will need to turn things around to retain its crown in 2023. On the other hand, Vodafone's last place may lie in its weaker performance in January 2022. However, it is improving and has a much better latency than its competitors in October and November.

## 2.6 Quality of Experience (QoE)

The indicators used in this section are the nPerf performance rates (PR). More details in the appendices (§ 6.1.2).

### 2.6.1 Web browsing

Average performance for the loading of the 5 most frequented websites by Internet users in Ireland (excluding YouTube).

*The highest rate is the best.*

**Vodafone provided the best performance rates in web browsing over the last year.**

Vodafone leads the battle comfortably. Three Mobile is in the second position, approximately 6 points below the winner, whereas eir obtains the weakest rate.

The graph above shows the *monthly* evolution of the average performance rate over the period.

As with uplink speed, Vodafone has led in web browsing all year. On the other hand, eir is likely to come third due to a sharp drop in its results in August.

## 2.6.2 Video streaming

Measuring the visualization quality of a video on the YouTube streaming platform.

*The highest rate is the best.*

**Vodafone provided the best performance rate in mobile video streaming over the last year.**

Vodafone is also the best performer in this area. The results are similar to those for web browsing, except that Three is relegated to last place, in favour of eir Mobile. In any case, the average level of video streaming appears to be quite comfortable in Ireland, regardless of the operator.

The graph above shows the *monthly* evolution of the average performance rate over the period.

While the leader experienced a slight weakening during the summer, and eir has fallen drastically since August, Three has shown excellent dynamics that have put it at the top of the ranking since that month. It has maintained this advantage since, excepting December.

## 2.7 4G and 5G connection rates

The principle is simple: for each operator, the number of tests performed in 4G/5G is divided by the total number of cellular tests. In other words, this rate corresponds to the probability of being connected in 4G/5G with a given ISP.

For the relevance of the result, we exclude beforehand all the tests carried out on the terminals which do not make it possible to benefit from the technology concerned.

Important note: we do not have the possibility to distinguish between commercial offers. Consequently, although few in number, users who do not have a 4G/5G offer, but have a 4G/5G device, are not excluded from the results.

### 2.7.1 4G connection rate

Statistics based on **14.645 tests** performed on 4G compatible terminals. See the complete list in appendix.

**Vodafone recorded the best 4G connection rate of 2022.**

As expected, Three and eir Mobile show a lower rate than Vodafone, because of their higher rate of 5G connexions (see next).

## 2.7.2 5G connection rate

Statistics based on **9.382 tests** performed on 5G compatible terminals, allowing the identification of the 5G technology (**Android only**). See the complete list in appendix.

*The highest rate is the best.*

**Three and eir recorded the best 5G connection rate of 2022.**

These ISP share the exact same rate. Near one third of the tests being performed on their networks and on capable devices are made with this latest cellular generation.

## 2.8 nPerf scores

The nPerf score, expressed in nPoints, gives an overall picture of the quality of a connection. It takes into account the measured bitrates (2/3 on download + 1/3 on upload), the latency and is affected by QoE tests equally (browsing / streaming). The value of the points for the rates and the latency is calculated on a logarithmic scale, to better represent the perception of the user.

Thus, this score reflects the overall quality of the connection **felt by the user**.

The results below consider all the previous indicators and therefore all the tests carried out. As technologies are grouped together, the proportion of tests in different technologies strongly impacts this global trend.

*The highest value is the best.*

**Vodafone subscribers enjoyed the best mobile Internet performances in Ireland in 2022.**

Thanks to the nPerf application, find this global indicator directly on your smartphone or tablet, via the « Compare » function at the end of the full test. It is updated in real time over 14 rolling days.

The graph above illustrates the *monthly* evolution of the score over the period.

Vodafone has obtained better average scores than its competitors every month until August. After that, it remains above 100k points, but is caught by Three. Indeed, the latter started the year with a considerable delay, and after a tough battle for second place with eir, saw its score explode from August onwards, at the same time as eir broke down and plummeted, ending up below 80k points at the end of the year. As for the different measures of the Speed tests, they are equally divided between the ISPs: Three wins download speeds, Vodafone wins upload speeds, and eir wins latency. However, Vodafone's lead in the Quality of Experience tests eventually tipped the scales in its favour for the overall win.

## 3 5G focus : main results

### 3.1 Data volume and distribution

The nPerf application allows the user to perform a full test (\*), or each test separately. Between **January 1<sup>st</sup>, 2022** and **December 31<sup>st</sup>, 2022** we counted in Ireland, after filtering (see § 6.1.4), **4.669 unit tests**.

| Technology | Speed | Browsing | Streaming | Total |
|------------|-------|----------|-----------|-------|
| 5G         | 2.020 | 1.348    | 1.301     | 4.669 |

(\*) one full test (speed, web browsing, streaming) = 3 unit tests

The overall distribution of the tests per provider is as follows:

### 3.2 Reminder : 5G connection rate

The following statistics are based on 9.382 tests, carried out on 5G networks. For the sake of accuracy, and as explained earlier, only Android devices have been considered.

### 3.3 Download speed (5G)

*The highest speed is the best.*

**Three subscribers enjoyed the best average 5G download speed in 2022.**

### 3.4 Upload speed (5G)

*The highest speed is the best.*

**Vodafone subscribers enjoyed the best average 5G upload speed in 2022.**

### 3.5 Latency (5G)

*The shortest time is the best.*

**Three subscribers enjoyed the best average 5G latency in 2022.**

### 3.6 Web browsing (5G)

*The highest rate is the best.*

**Vodafone subscribers enjoyed the best average 5G web browsing in 2022.**

### 3.7 Video streaming (5G)

*The highest rate is the best.*

**Three subscribers enjoyed the best average 5G video streaming in 2022.**

### 3.8 nPerf score (5G)

*The highest value is the best.*

**Three and Vodafone subscribers enjoyed the best 5G Internet performances in 2022.**

These ISP are close enough in this area to share the win. Compared to the overall results, Three takes the lead on the latency from eir, and on the video streaming from Vodafone. eir Mobile remains a large step behind, almost 20k points under the highest score.

## 4 You too, participate in the nPerf panel!

To participate in the panel, simply use the nPerf application, available for free on the Apple AppStore for iPhone and iPad, and on Google Play for Android devices.

| Download the nPerf App |                                                                   |
|------------------------|-------------------------------------------------------------------|
| Android                | <a href="http://android.nperf.com/">http://android.nperf.com/</a> |
| iOS                    | <a href="http://ios.nperf.com/">http://ios.nperf.com/</a>         |

Also participate in the Fixed Connections Barometer panel by testing your DSL, cable or optical fiber connection at [www.nPerf.com](http://www.nPerf.com).

## 5 Custom analysis & contact

Do you need further studies, or want to get the raw data, punctually or automatically, to compile it yourself?

You can contact nPerf via [www.nPerf.com](http://www.nPerf.com) through the "Contact Us" section, or directly from the mobile app.

**Phone contact: +33 482 53 34 11**

**Address: nPerf SAS, 87 rue de Sèze, 69006 LYON, France**

## 6 Appendices

### 6.1 Methodology

#### 6.1.1 The panel

nPerf offers a free application for testing the quality of the Internet connection, downloadable for free on Android and iOS (Apple) mobile devices.

Everyone is free to use this app to measure the quality of their mobile connection. The panel of this study is formed by the users of the nPerf application in **Ireland**. In addition, the results from the nPerf speed tests integrated on our partner websites are also included in the panel.

Thus, the nPerf study is based on the **thousands of tests** carried out monthly, exclusively by the operators' end customers, which makes it the "crowdsourced" study based on **one of the largest panels of the country**.

These tests reflect the **actual experience of the general public** on the various Internet networks.

#### 6.1.2 Definitions and goals

##### 6.1.2.1 Success rate

The success rate is calculated by dividing the number of successful attempts by the total number of attempts made.

##### 6.1.2.2 Speed and latency tests

The purpose of the nPerf Speed Test is to measure the maximum capacity of the connection in terms of bit rate and latency.

To achieve this, nPerf simultaneously establishes multiple connections to saturate the bandwidth to accurately measure it.

The speed measurements thus reflect **the maximum capacity** of the connection. This rate may not be representative of the user experience experienced during normal use of the Internet because it is measured only on nPerf servers.

The user experience is then measured by the Quality of Experience (QoE) tests.

##### 6.1.2.3 The browsing test

The browsing test allows the user to accurately measure the loading time of the 5 websites most frequented by local Internet users (YouTube is excluded from this test as it is subject to the following test).

This indicator reflects the quality of navigation perceived by the user. It can however be negatively impacted by the performance of the terminal used, especially if it is old.

It is calculated considering the loading time of the page. A page loaded in 10 seconds or more gets a 0% performance rate and a page loaded instantly gets a performance rate of 100%. For example, a page loaded in 2 seconds will get a performance rate of 80%.

#### 6.1.2.4 The YouTube streaming test

The goal of the streaming test is to measure the quality of video viewing on the most popular streaming platform around the world: YouTube.

It operates under conditions similar to the direct use of YouTube and therefore takes into account the quality of the network between the user and the YouTube servers.

It is calculated considering all the time required to load the video (before or during playback). If the ratio between the duration of the video and the overall reading time (reading + loading) tends to 1 then the performance index will tend towards 100%. And conversely, the more the ratio moves away from 1, the more the index will tend towards 0%.

#### 6.1.3 nPerf servers

To ensure maximum user bandwidth at all times, nPerf relies on a network of servers dedicated to this task.

These servers are hosted in the country and abroad. nPerf has also installed dedicated servers directly at some operators, to maximize measurement reliability. **Local carriers are welcome to install nPerf servers, that's free!**

The total bandwidth available for **Ireland** is **11,5 Gb/s**, and reaches more than **12 Tb/s** worldwide, with more than **2.560** active nPerf servers!

#### 6.1.4 Filtering of test results

The results obtained are subject to automatic and manual checks to avoid duplication and to rule out possible abusive or fraudulent use (massive tests, robots ...). The exclusive nPerf algorithm retains only the relevant tests, thus eliminating biases related to the overrepresentation of certain terminals, users or test locations.

The results are classified by provider. The results for each provider include the tests performed on the partner networks (roaming, pooling).

##### 6.1.4.1 Filtering of the devices

In order not to introduce any bias related to the capabilities of the terminals, only the tests carried out on 4G or higher compatible terminals are retained. The exhaustive lists are provided in the appendix.

For calculating the 5G connection rates, only 5G compatible terminals are selected. Their exhaustive list is provided in the appendix below. Moreover, given that iOS devices do not provide reliable information about the cellular generation used for the tests, nPerf has only taken into account Android results for this calculation.

### 6.1.5 Statistical accuracy

With regard to the total volume of unit tests, the statistical precision used in this publication is:

| Category | Absolute values | Percentages |
|----------|-----------------|-------------|
| Global   | 3%              | 1 point     |
| 5G focus | 3%              | 1 point     |

If, for a given indicator, one or more operators have results very close enough to the best, in the confidence interval defined above, these will **share the first place**.

## 6.2 Complete list of devices selected for 2022

### 6.2.1 4G compatible devices

Samsung Galaxy S4 LTE, Samsung Galaxy S3 LTE, LG Nexus 5, Samsung Galaxy Note 3 LTE, Sony Xperia SP, Sony Xperia Z1, Samsung Galaxy Mega 6.3" LTE, HTC One M7, Sony Xperia Z, Samsung Galaxy Express, HTC One mini, Samsung Galaxy S4 LTE+, Samsung Galaxy S4 Mini LTE, LG G2, Samsung Galaxy Note LTE 10.1", Samsung Galaxy Tab 3 10.1" LTE, HTC One X+, Bouygues Telecom Ulytm 4, LG Optimus G, HTC One SV, Asus Nexus 7, Samsung Galaxy S4 LTE (Google), Sony Xperia Z Ultra, Samsung Galaxy S4 Active, LG Optimus True HD, HTC Desire 601, Samsung Galaxy Ace 3 LTE, Samsung Galaxy S4 LTE Advanced, Samsung Galaxy Note II LTE, Alcatel One Touch Idol S, Bouygues Telecom BS501, Sony Xperia V, LG Optimus F6, HTC One max, Apple iPhone 5, Samsung Galaxy Note 10.1" LTE, Apple iPhone 5S, Apple iPhone 5C, Apple iPad Air, Apple iPad mini 2, Apple iPad 4, Nokia Lumia 920, Nokia Lumia 925, Nokia Lumia 1020, Nokia Lumia 820, Nokia Lumia 625, Nokia Lumia 1520, Nokia Lumia 1320, Sony Xperia Z1 Compact, Huawei Ascend G740, Samsung Galaxy S5, Sony Xperia Z2, HTC One M8, HTC One VX, Motorola Moto X, RIM BlackBerry Z10, LG G3, Nokia Lumia 930, Motorola Moto G 4G, Nokia Lumia 635, Sony Xperia M2, HTC One mini 2, HTC Desire 610, Alcatel One Touch Idol 2 S, Samsung Galaxy S5 LTE-A (SM-G906S), HTC Desire 816, Samsung Galaxy S5 LTE-A (SM-G901F), ZTE Grand S Flex, Apple iPhone 6, Apple iPhone 6+, Sony Xperia Z3, Sony Xperia Z3 Compact, Samsung Galaxy Alpha LTE-A, Samsung Galaxy Alpha LTE, Samsung Galaxy Note 4 LTE, Samsung Galaxy Note 4 LTE-A, Motorola Moto X 2014, OnePlus One, Motorola Nexus 6, Apple iPad Air 2, Apple iPad mini 3, Wiko WAX LTE, Samsung Galaxy Core LTE, Samsung Galaxy S5 mini, Samsung Galaxy Note 3 Lite, Samsung Galaxy S4 VE, Wiko Rainbow 4G, Archos 50 Helium 4G, Archos 50b Helium 4G, Archos 45 Helium 4G, Archos 45b Helium 4G, Samsung Galaxy Grand II LTE, Nokia Lumia 735, Nokia Lumia 830, Nokia Lumia 822, Nokia Lumia 928, Nokia Lumia 636, Motorola Droid Turbo, Samsung Galaxy Note Edge, Samsung Galaxy S5 Active, Huawei Ascend Mate 7, Huawei Honor 6, Huawei Ascend G620s, Samsung Galaxy Ace Style LTE, Meizu MX4, Meizu MX4 Pro, Sony Xperia E3, Sony Xperia T3, Wiko Birdy, Wiko Highway 4G, Samsung Galaxy S6, Samsung Galaxy S6 Edge, HTC One M9, Asus Zenfone 2, Samsung Galaxy Grand Prime, Archos 50 Diamond, LG G3 S, Samsung Galaxy A3, Samsung Galaxy Tab 4 10.1" LTE, Samsung Galaxy Tab S 10.5" LTE, Samsung Galaxy Core Prime, Samsung Galaxy A5, Wiko Ridge Fab 4G, Wiko Ridge 4G, Motorola Moto G2, Microsoft Lumia 640 XL LTE Dual SIM, Huawei Ascend G7, OnePlus Two, Apple iPhone 6s, Apple iPhone 6s+, Samsung Galaxy Note 5, Samsung Galaxy J2, Samsung Galaxy J7, Samsung Galaxy J5, Samsung Galaxy J1 Ace, Samsung Galaxy A8, Motorola Moto X Style, Motorola Moto X Pure Edition, Motorola Moto G3, Samsung Galaxy S6 Edge+, Sony Xperia Z3+, LG G4, Huawei Honor 7, LG Nexus 5X, Huawei Nexus 6P, Hisense Andromax R, Hisense PureShot+, Hisense PureShot, Huawei P8lite, Huawei P8, Sony Xperia Z5 Cat6, Sony Xperia M4 Aqua Dual, Sony Xperia Z5 Compact Cat6, Sony Xperia M4 Aqua, Sony Xperia M2 Aqua, Sony Xperia C5, Sony Xperia E4g, Samsung Grand Prime VE, Samsung Galaxy S5
