Expert in the telecom network optimization

nPerf is an independent French company based in Lyon (France). For over a decade, nPerf has been a trusted partner for both fixed and mobile operators, providing comprehensive network testing solutions and analysis. Our mission is to accurately measure, evaluate, and enhance the understanding of Internet connectivity around the world.

300k+ tests daily
worldwide.

26Md+ coverage
scans in total.

3k+ servers all
around the world.

Test your Internet connection with nPerf!

nPerf allows you to test the quality of your fixed, mobile, or Wi-Fi Internet connections up to 10 Gb/s! Download our app or visit our website!

2. Executive Summary

The subscribers of KPN and Odido enjoyed the best mobile Internet performances in 2025.

Mobile Internet connections in Netherlands

	KPN	Odido	Vodafone
▼ Download speedss (Mb/s)	156.57	197.86	83.04
▲ Upload speedss (Mb/s)	35.37	30.68	19.04
◀▶ Latency (ms)	29.25	29.91	28.70
🌐 Web browsing (%)	82.82	83.11	82.65
🎥 Youtube streaming (%)	85.19	85.14	82.56
📶 nPerf Score (nPoints)	112 855	114 804	99 016

Introduction

In the Dutch mobile Internet sector, KPN and Odido share the lead, with both operators achieving excellent results in the current period. The Netherlands demonstrates solid mobile performance with operators delivering competitive services across all key metrics. In 5G technology specifically, both KPN and Odido stand out with impressive scores. Regarding individual metrics, Odido leads in download speeds, offering users efficient streaming and downloading capabilities, while KPN delivers the best upload speeds, ideal for video conferencing. Vodafone provides the lowest latency, perfect for responsive online gaming, while all three major operators demonstrate strong performance in browsing and video streaming experiences.

Odido: Strong download performance and overall co-leader

With a score of 114,804 nPoints, Odido shares the top position in the Dutch mobile sector with KPN. The operator is also n°1 in 5G with KPN and excels particularly in download speeds, reaching an impressive 197.9 Mbps, which represents a substantial 59.9% improvement. This performance allows users to enjoy seamless 4K streaming and quick downloads of large files. Odido also delivers good results in browsing (83.1%) and video streaming (85.1%), ensuring a smooth web experience. The operator has also improved its upload speeds by 10.9%, enhancing the quality of video calls and content sharing.

KPN: Balanced performance with upload strength and co-leader

KPN follows closely with 112,855 nPoints, sharing the top position on the mobile market and in the 5G segment with Odido. The operator is the undisputed n°1 in upload speeds at 35.4 Mbps, making it the best choice for users who frequently share content or participate in video conferences. KPN has improved its download speeds by 26.6%, now reaching 156.6 Mbps, while maintaining strong performance in browsing (82.8%) and video streaming (85.2%). These balanced results across all metrics ensure a reliable mobile experience for its customers.

Vodafone: Leading in responsiveness

Vodafone achieves 99,016 nPoints, securing the 3rd position in the overall ranking. The operator distinguishes itself by providing the best latency at 28.7 ms, representing a significant 19.3% improvement. This low latency ensures responsive online gaming and real-time applications. Vodafone also delivers solid browsing performance at 82.6% and comparable video streaming quality at 82.6%, offering users a dependable mobile experience.

Conclusion

The Dutch mobile sector demonstrates healthy competition with KPN and Odido sharing the leadership position. The significant improvements in key metrics across all operators highlight the continuous development of mobile networks in the Netherlands, with each provider offering distinct advantages. This competitive landscape ultimately benefits Dutch consumers, who have access to high-quality mobile Internet services regardless of their chosen provider.

4. Methodology

nPerf provides a free application to assess Internet connection quality via its website and mobile apps (Android, iOS). Daily, thousands of people rely on nPerf for speed tests in their country, contributing to a comprehensive crowdsourced database covering all operators.

The study employs a strong filtering method to reflect real customer experiences on a specific network (mobile or fixed line). Measures are taken to prevent probes and measurement robots from affecting the results.

We assess:

▼ Download bitrate

Indicates the amount of data your connection can receive in one second from the nPerf server. The highest the measured value, the best is the bitrate of your connection.

▲ Upload bitrate

Indicates the amount of data your connection can send in one second to the nPerf server. The highest the measured value, the best is the bitrate of your connection.

◄► Latency (ping)

It indicated the delay a small packet of data requires to make a round-trip from your computer to the nPerf server. The shorter the delay, the most reactive your connection is. The mean is the minimum value.

🌐 Browsing performance

The browsing test assesses the load time of the fully loaded pages, including images, javascript, CSS, and fonts, for the five most popular sites. This indicator reflects the perceived quality by the user.

📺 Streaming performance

The video streaming test gauges the load time of a fully loaded video in three resolutions on YouTube, considering stalls during playback. This indicator reflects the perceived quality by the user.

Statistical precision is crucial in accurately determining winners. At nPerf, we prioritize test quality, precise reporting, and transparency. Analyzing a large volume of tests in this study, we've achieved 3.0% precision for absolute values, highlighting the reliability and accuracy of our data.

For a more comprehensive understanding of the user experience, our report features test results during both Busy hours (6 PM to 11 PM) and Idle hours (the rest of the day). Busy hours, marked by network strain, can impact user experience through congestion. This approach helps in understanding how network performance fluctuates throughout the day.

We only include national Internet service providers with test share above 5% share. The chart below shows the overall test distribution for each service provider.

The subscribers of KPN and Odido enjoyed the best mobile Internet performances in 2025.

The nPerf score takes into account the measured speedss, the latency and the QoE tests.
The value of the points for the rates and the latency is calculated on a logarithmic scale, to better represent the perception of the user.
Thus, this score reflects the overall quality of the connection experienced by the user.

The background of the image features a series of thin, light-colored wavy lines that create a sense of motion and depth. These lines are layered and overlap, forming a complex, organic pattern that flows across the frame. The overall effect is reminiscent of a stylized wave or a digital signal.
