Expert in the telecom network optimization

nPerf is an independent French company based in Lyon (France). For over a decade, nPerf has been a trusted partner for both fixed and mobile operators, providing comprehensive network testing solutions and analysis. Our mission is to accurately measure, evaluate, and enhance the understanding of Internet connectivity around the world.

 **300k+** tests daily
worldwide.

 **26Md+** coverage
scans in total.

 **3k+** servers all
around the world.

Test your Internet connection with nPerf!

nPerf allows you to test the quality of your fixed, mobile, or Wi-Fi Internet connections up to 10 Gbps! Download our app or visit our website!

2. Executive Summary

The subscribers of Beeline enjoyed the best Mobile Internet performances in 2025 in Uzbekistan.

Mobile Internet performance in Uzbekistan

	Beeline	Mobiuz	Ucell	UzMobile
▼ Download bitrates (Mb/s)	20.41	15.26	18.64	18.66
▲ Upload bitrates (Mb/s)	9.16	5.62	7.53	7.66
◀▶ Latency (ms)	73.50	86.02	78.46	85.00
🌐 Web browsing (%)	35.25	36.16	34.07	36.11
📺 Youtube streaming (%)	66.75	66.14	68.18	64.22
🏆 nPerf Score (nPoints)	39 181	34 158	37 388	36 334

nPerf.com

The Uzbekistan mobile Internet sector shows an average score of 37,606 nPoints. Beeline leads with 39,124 nPoints and dominates in download, upload, and latency. The sector features strong competition with Ucell recording the highest progression at +11.0%.

Beeline: consolidated leadership

Beeline leads with 39,124 nPoints and ranks first in download speed (20.3 Mbps), ideal for HD streaming. The operator dominates upload speed with 9.1 Mbps, ensuring quality video conferencing. It also achieves the best latency at 73.5 ms, perfect for online gaming and real-time communications. Beeline ranks second in video streaming (66.8%) and browsing (35.2%).

Ucell: strong progression

Ucell ranks second with 37,386 nPoints and records a strong progression of +11.0%. The operator dominates video streaming with 68.2%, ensuring smooth viewing. It achieves competitive performances in download speed (18.6 Mbps, 2nd place) and latency (78.5 ms, 2nd place).

UzMobile: competitive browsing

UzMobile ranks third with 36,308 nPoints and leads in browsing with 36.1%, sharing first place ex-aequo with Beeline. The operator achieves solid performances in upload speed (7.6 Mbps, 2nd place).

Mobiuz: fourth place

Mobiuz ranks fourth with 34,158 nPoints and co-leads in browsing with 36.16%, sharing first place ex-aequo with Beeline and UzMobile.

Beeline strengthens its leadership with balanced performances across all indicators. The sector shows positive dynamics with Ucell's strong progression and intense competition on download speed. Users benefit from increasingly powerful offerings, particularly for streaming and video conferencing.

4. Methodology

nPerf provides a free application to assess Internet connection quality via its website and mobile apps (Android, iOS). Daily, thousands of people rely on nPerf for speed tests in their country, contributing to a comprehensive crowdsourced database covering all operators.

The study employs a strong filtering method to reflect real customer experiences on a specific network (mobile or fixed line). Measures are taken to prevent probes and measurement robots from affecting the results.

We assess:

▼ Download bitrate

Indicates the amount of data your connection can receive in one second from the nPerf server. The highest the measured value, the best is the bitrate of your connection.

▲ Upload bitrate

Indicates the amount of data your connection can send in one second to the nPerf server. The highest the measured value, the best is the bitrate of your connection.

◄► Latency (ping)

It indicated the delay a small packet of data requires to make a round-trip from your computer to the nPerf server. The shorter the delay, the most reactive your connection is. The mean is the minimum value.

🌐 Browsing performance

The browsing test assesses the load time of the fully loaded pages, including images, javascript, CSS, and fonts, for the five most popular sites. This indicator reflects the perceived quality by the user.

📺 Streaming performance

The video streaming test gauges the load time of a fully loaded video in three resolutions on YouTube, considering stalls during playback. This indicator reflects the perceived quality by the user.

Statistical precision is crucial in accurately determining winners. At nPerf, we prioritize test quality, precise reporting, and transparency. Analyzing a large volume of tests in this study, we've achieved 1.5% precision for absolute values and 1% point for percentage-based results, highlighting the reliability and accuracy of our data.

For a more comprehensive understanding of the user experience, our report takes into account test results during both Busy Hours (6 PM to 11 PM) and Idle Hours (the rest of the day). Busy Hours, marked by network strain, can impact user experience through congestion. This approach helps in understanding how network performance fluctuates throughout the day.

We only include national Internet service providers with test share above 5% share. The chart below shows the overall test distribution for each service provider.

Overall distribution of the tests per provider (ISPs Share)

nPerf QoE nPerf Score (nPoints)

Source :
nPerf.com

The subscribers of Beeline enjoyed the best Mobile Internet performances in 2025.

The nPerf score takes into account the measured bitrates, the latency and the QoE tests. The value of the points for the rates and the latency is calculated on a logarithmic scale, to better represent the perception of the user. Thus, this score reflects the overall quality of the connection experienced by the user.
